

Chapter 10

SUPPLEMENTARY USES

Section 10.101 Natural Resource Overlay District One

To provide guidelines for development activity within the Natural Resource Overlay District (District) as shown in Appendix G throughout East Baton Rouge Parish. Uses permitted pursuant to the underlying zoning district; and in addition, on parcels of land containing at least five (5) contiguous acres, those uses involving the removal of soil, sand or gravel by excavating, stripping, dredging, mining, or otherwise taking (including on-site operations appurtenant to taking such as washing, grading, sorting, storage, and grinding operations). No natural resources extracted outside the limits of an approved Natural Resource Overlay District shall be brought in for washing, grading, or further processing. The district boundaries as set forth in this Ordinance may be altered only with the affirmative vote of two-thirds (2/3) of the members of the Metropolitan Council voting at a meeting in which a quorum is present.

A. The following minimum site design standards shall be required:

1. A minimum site of five (5) acres is required, with a minimum frontage of two hundred (200) feet on a publicly maintained street or road.
2. No excavation for extraction of dirt, sand, or gravel within a Natural Resource Overlay District may be within one thousand (1000) feet of any residential dwelling; five hundred (500) feet of any residentially zoned property or recognized residential subdivision; or two hundred (200) feet of adjoining property lines. These distances may be varied when written permission has been granted by the adjoining property owner(s) and approved by the City Parish Planning Commission and Metropolitan Council.
3. All private access roads shall be of a dust-free surface for a distance of one hundred (100) feet from any public street right-of-way. To reduce the effects of airborne dust, dirt, and noise, all equipment for sorting, crushing, loading, and other equipment pertaining to pit excavation shall not operate closer than three hundred (300) feet from any public street or road right-of-way, residential dwelling, recognized residential subdivision, or residentially zoned property. Scales and related structures shall be set back a minimum of one hundred (100) feet from rights-of-way of public roads and streets and a minimum of one hundred (100) feet from side property lines.
4. Roadside Landscape: Existing trees and ground cover adjoining public streets and roads shall be preserved where possible so as to aid in the screening from public view of mining activities. Additional vegetative landscape or other acceptable landscaping techniques shall be required to accomplish screening from public view.

The preceding minimum site design requirements may be increased, extended or enlarged when deemed necessary to protect the health, safety, and general welfare of the public. The Planning Commission may recommend, and the Metropolitan Council may adopt additional site design requirements as necessary including limiting the hours of operation.

- B. In addition to the above requirements, the following procedures shall be followed for creation of a Natural Resource Overlay District:

Application:

1. Application shall be completed and filed with the Office of the Planning Commission.
2. In addition to what is required on the application, the following information shall be attached:
 - a. A vertical aerial photograph, showing current geographical and topographical conditions, enlarged to a scale equal to one (1) inch equals four hundred (400) feet. Area covered by the vertical aerial photograph shall include:
 - (1) All land requested in the petition.
 - (2) All contiguous land, which is or has been used by the owner or leasehold applicant for any extraction, treatment, or storage.
 - (3) All public or private roads, which provide access to the proposed use. (Access by way of residential streets is prohibited.)
 - (4) All recognized residential subdivisions, residentially zoned properties, and existing residential dwellings within one thousand (1,000) feet of the proposed use.
 - (5) The boundaries of the above listed items shall be clearly delineated and labeled on the aerial photograph.
 - b. A survey map of the property, prepared by a land surveyor licensed by the State of Louisiana and drawn to a scale of one (1) inch equals two hundred (200) feet, shall be submitted in five (5) copies. This survey map shall include:
 - (1) Boundary of entire tract showing bearings and dimensions.
 - (2) Boundary of area showing bearings and dimensions.
 - (3) Existing zoning boundaries.
 - (4) Existing geographic features of the site, including boundaries of proposed excavation pits, overburden storage areas, wooded areas, natural drainage flow over the site, shading of flood hazard areas as shown on current Federal Insurance Rate Maps, FIRM, and any other significant features.
 - (5) Existing land use of the site including buildings, structures, and boundaries of any previously mined areas.
 - c. A completed copy of the Development Permit application, as required by Title 7, Chapter 15.15 Permit Procedures of the Code of Ordinances of the City of Baton Rouge and Parish of East Baton Rouge.

- d. A statement or report by a professional engineer, soil scientist, or geologist regarding the effect the proposed operation will have upon the watershed of the area with particular attention being devoted to erosion control and control of run off of sediments associated with the proposed operations as well as the impact on any public or private water wells in the area.
- e. A statement or letter of no objection from the Office of Cultural Development, Division of Archeology of the State of Louisiana, that the proposed site is not a site of historical or archaeological significance.
- f. A detailed plan for extraction of the natural resource deposits. This plan shall include:
 - (1) The proposed dates for the initiation and termination of such operation;
 - (2) The maximum anticipated depth of the pit area(s) and proposed slope(s) of the sides of the pits;
 - (3) A detailed list of the type and quantity of equipment proposed to be used in connection with the use including bulldozers, cranes, washers, crushing equipment, trucks, dredges, and other mechanical equipment;
 - (4) An estimate of the average number of trucks proposed to enter and leave the property per day;
 - (5) The proposed hours of operation each day, number of employees, and the proposed days of operation during the week;
 - (6) A proposed plan of land reclamation and a statement or supportive documents, furnished by the applicant, indicating how the proposed site will be re-used in a manner compatible with the Master Plan for Future Land Use;
 - (7) Proposed grading and sloping plan of disturbed areas so as to prevent soil erosion, stagnant water, and to render the area safe and hazard free to the general public. The U. S. D. A. Soil Conservation Service shall review this grading and sloping plan, and a letter of no objection to the proposed grading and sloping plan from that agency is to be attached and made part of the application;
 - (8) In order to minimize flood losses and flood damage a letter of no objection from the City Parish Department of Public Works, stating, in part, that the proposed plans of operation are reasonably consistent with the purpose and intent of City Parish Code of Ordinances, Title 8, Chapter 8 Flood Damage Prevention; and
 - (9) A letter of jurisdictional determination from the U. S. Army Corps of Engineers indicating permits to be obtained before operations may be commenced on the proposed site. (Section 10 of the Rivers & Harbors Act and/or Section 404 of the Clean Water Act) Additionally, a letter of no objection or, if applicable, a water

quality certification from Louisiana Department of Environmental Quality, Water Resources Section.

C. Enforcement and Review

1. Development Permit to be Issued: After Site Plan approval and establishment of Natural Resource Overlay District, the City-Parish Department of Public Works shall issue a Development Permit for a specified length of time including documentation of all conditions or agreements made part of and pursuant to Site Plan review and approval, and to be periodically inspected (monthly, quarterly, or as deemed necessary) by DPW to ensure the approved site plan is being followed. This permit may be revoked at any time in which the Department of Public Works determines that the approved site plan, or other agreements or conditions made pursuant to site plan approval by the developer is not being followed. Before such permit revocation, the Department of Public Works shall give written notification to the operator by a certified letter describing the specific violations or unauthorized variances from the approved site plan. The operator shall have thirty (30) days from date of notification to correct such violations or may appeal such permit revocation in writing to the Planning Commission and request a public hearing to be held showing reasons why such variances are necessary and reasonable. The Planning Commission shall recommend to the Metropolitan Council approval or denial of any such variances or amendments to the approved site plan and provide written reasons why such changes, variances, or amendments are necessary. The Metropolitan Council shall hold a public hearing to consider such site plan changes, variances, or amendments and may amend previously approved site plans as deemed necessary. All required state and federal permits shall be secured prior to site development.
2. Sand, gravel, and dirt pit operations existing at the time of the adoption of these requirements shall be inspected by the City-Parish Department of Public Works within a reasonable time period; a determination made as to the non-conforming nature of such operations; and if applicable, issued a temporary certificate of occupancy (or other such non-conforming use permit as deemed appropriate by the Department of Public Works) indicating the non-conforming nature of the activity being performed and the legal description of the property(s) where such activity is being carried out. Non-conforming Sand, Gravel, and Dirt Pit Operations shall operate pursuant to Chapter 7 “Non-Conforming Situations” of this Unified Development Code and in compliance with all applicable State and Federal laws and regulations.
3. Violations:

In addition to Development Permit revocation as established in Section 10.101a.C.1, any violation of the provisions of the Natural Resource Overlay District shall constitute a violation of the Unified Development Code and shall be subject to penalty as specified in Section 6.7.

Section 10.102 Urban Design Overlay Districts

A. Enforcement and Review

1. New Construction

- a. For new construction, Planning Commission staff shall certify compliance prior to issuance of building permits.
- 2. Existing Development
 - a. For existing structures, Planning Commission staff shall certify compliance prior to issuance of Certificates of Occupancy.

Section 10.102a Urban Design Overlay District One – Oak Villa Boulevard

A. Purpose

To provide guidelines for development activity within the Oak Villa Boulevard Urban Design Overlay District (District) as shown in Appendix G, which includes lots along Oak Villa Boulevard from Florida Boulevard to Greenwell Springs Road. This district is to strengthen the physical and economic character of the neighborhood by mitigating or avoiding incompatibility.

B. Utilities

1. Lighting

- a. Lighting mounted on buildings or fences directed toward residential property shall be no more than seven (7) feet above the ground.
- b. Pole mounted lighting cannot exceed eighteen (18) feet in height.
- c. Any external lighting must be oriented inward toward the development to minimize intrusion on abutting residential property.
- d. Single lamp outdoor lighting installations cannot exceed an output rating of ten (10,000) lumens. The maximum level of light trespass shall be two (2) footcandles. All luminaries or light fixtures must be shielded or cut-off.

C. Signage

1. Prohibited Signs

- a. Pole signs, temporary signs, and changeable letter signs are not allowed.

2. Illumination

- a. A wall, canopy, awning, projecting or monument sign may be illuminated but may not flash, blink or fluctuate and may not be animated.
- b. No internal illumination is allowed.

3. Permanent On-Premise Signs By Type

a. Wall Signs

- (1) Wall signs may not exceed thirty-two (32) square feet in sign area. One wall sign is allowed per primary business entrance.

- b. Canopy and Awning Signs
 - (1) Canopy, awning and projecting signs are not to exceed twelve (12) feet in length and thirty-two (32) square feet per face.
- c. Detached Signs
 - (1) One monument sign is allowed per street frontage. Monument signs may not exceed six (6) feet in height or width. The sign area may not exceed thirty-six (36) square feet per face.

D. Parking

- 1. Off Street Parking
 - a. All parking lots fronting on Oak Villa Boulevard must have concrete curb and gutter configuration. Parking blocks/ logs are not allowed.
- 2. Alternative Porous Pavement Parking
 - a. Ten (10) percent of parking lot pavement must utilize alternative porous pavement.

E. Landscape and Trees

- 1. Landscape Standards
 - a. Street Yard Planting Area
 - (1) A ten (10) foot street yard planting area is required along Oak Villa Boulevard. The ten foot street yard planting area must be measured from the street right of way. The minimum requirements for the street yard planting area include one (1) Class “A” tree or three (3) Class “B” trees for every fifty (50) linear feet of public street frontage, or fraction thereof, measured at the property line. Seventy-five (75) percent of the required trees must be evergreens and may be located anywhere within the street planting area.
 - (2) The street planting area will also be planted with shrubs and ground cover plantings to the extent that fifty (50) percent of the street planting area is planted with vegetation other than turf grass.
 - a. Buffer Yard Screening
 - (1) When a new building is constructed in the design district, a solid eight (8) foot fence with a flat top must be installed between any commercial or office and residential properties, or a landscape/ buffer plan must be approved by the Planning Commission staff. The fence shall be maintained in a structurally sound manor, in good appearance, replaced when necessary and kept free of refuse and debris.

- (2) Fencing made of barbed wire, razor wire, plastic or chain-link is prohibited.

b. Vehicular Use Area

- (1) All parking areas must contain a minimum of two (2) Class “A” trees or four (4) Class “B” trees for every fifteen (15) parking spaces, or fraction thereof.
- (2) All vehicular use areas shall be required to have a minimum of ten (10) percent of the total vehicular use area landscaped with trees, shrubs, and ground cover other than turf grass.
- (3) No parking space is allowed to be further than forty (40) feet from a Class “A” tree.
- (4) Impervious parking areas must include tree plantings designed to result in forty (40) percent shading of parking lot surface areas within fifteen (15) years.

(5) Service Areas

- Utility areas, mechanical equipment or designated loading space shall be located at the rear of the building. Service areas should be designed to be part of the primary building.
- If the service area is separate from the building it serves, it must be enclosed by a six (6) foot opaque, wood, or masonry fence. The fence shall be maintained in a structurally sound manner, in good appearance, replaced when necessary and kept free of refuse and debris.
- All exterior trash, exposed storage areas, machinery, service areas, truck loading areas, utility buildings, air conditioning units and other similar structures must be screened from view from neighboring properties and streets with the same materials, color and/or style as the primary building in order to be architecturally compatible with the primary building.
- All roof equipment must be screened from public view so as not to be visible from the street.

F. Design Standards

1. Building Materials

a. Exterior Building Materials

- (1) Unpainted or painted standard grey concrete masonry units.
- (2) Residential type Vinyl or Aluminum siding (i.e. simulated-lapped board types).
- (3) Non-Architectural type pre-engineered metal building wall and roof components (trapezoidal panels with exposed fasteners, etc.).

- (4) Exterior Insulation Finish System (i.e. EIFS one-coat soft systems).
 - (5) Non-architectural type asphalt shingles (i.e. three-tab asphalt shingles).
- b. Exterior Building Material Required for Use on Exposed to View Facades
 - (1) Ceramic tile.
 - (2) Stucco (three-coat hard systems with hard or synthetic finish coat).
 - (3) Architectural type metal wall and roof panels (standing-seam panels, flush panels, etc. with concealed fasteners).
 - (4) Wood and/or Composite type siding and trim (i.e. beveled lapped siding, Hardiplank siding/trim and wood trim).
 - (5) Wood, Vinyl and Metal Soffit Panels (i.e. finished wood trim, perforated Hardiplank panels, vinyl or metal interlocking panels, aluminum vents, etc.).
 - (6) Decorative type concrete masonry units (i.e. split-faced, ground face, ribbed, brick, etc.).
 - (7) Exposed High Pitch roofing (architectural-type asphalt shingles, slate shingles, clay tile shingles, wood shingles, composite/cementitious simulated slate shingles, and metal shingles, etc.).
 - (8) Non-Exposed Low Pitch Roofing Systems (i.e. Built-up roofing, modified bitumen, EPDM, sprayed foam, etc.).

Section 10.102b Urban Design Overlay District Two – Bluebonnet Boulevard

A. Purpose

To provide guidelines for development activity within the Bluebonnet Boulevard Urban Design Overlay District (District) as shown in Appendix G along Bluebonnet Boulevard from Claycut Bayou to Airline Highway. This District is to strengthen the physical and economic character of the neighborhood by mitigating or avoiding incompatibility of buildings or services.

B. Waivers, Variances, and Exceptions

- 1. The Designated Line as set forth in this Ordinance may be altered only with the affirmative vote of two-thirds (2/3) of the members of the Metropolitan Council.

C. Permitted Uses

- 1. On the publicly owned lots marked on Appendix G, the use shall be limited to green space or access to a publicly dedicated right of way.

D. Utilities

1. Lighting

- a. Lighting mounted on buildings or fences shall be no more than seven (7) feet above the ground.
- b. Pole lighting is allowed in parking areas. Pole lighting is limited to eighteen (18) feet in height and may not be located in the Bufferyard.
- c. Any external pole mounted lighting must be oriented inward, toward the development or structures, to minimize intrusion into surrounding property. All external lighting must be shielded, bulb recessed and directional.

E. Signage

1. Prohibited Signs

- a. Except as provided below, and subject to the general requirements of the Unified Development Code only Monument Signs and Wall Signs are allowed in the Urban Design Overlay District, provided however, in no event shall the dimensions of the sign exceed the size limitations based on the zoning classification of a lot set forth generally in the Unified Development Code and provided, further, however that Pylon Signs shall be allowed along Jefferson Highway if otherwise permitted under the Unified Development Code.
- b. No off-premises signs are allowed.

2. Illumination

- a. An allowed Monument Sign may not flash, blink or fluctuate; and may not be animated.

F. Parking

1. Off-Street Parking

- a. All parking lots must have a concrete curb and gutter configuration. "Pin-on" parking bumper and/or parking blocks may be installed, but must be permanently affixed.

G. Landscape and Trees

1. Applicability of Landscape Requirements

- a. A building constructed or re-constructed within Urban Design Overlay District 2, shall, in addition to complying with the Unified Development Code requirements imposed based on the zoning classification of the lot upon which the building is constructed or reconstructed, shall comply with the following additional landscaping requirements.
- b. In the event the UDC requires additional affirmative landscaping obligations, the more burdensome provision shall apply.

2. Landscape Standards

a. Street Planting Area

- (1) A Street Planting Area is required within the ten (10) foot front yard on Bluebonnet Boulevard and Jefferson Highway. The minimum requirements for the street planting area include one (1) Class "A" tree or three (3) Class "B" trees for every fifty (50) linear feet of public street frontage, or fraction thereof, measured at the property line. Seventy-five (75) percent of the required trees must be evergreens and maybe located anywhere within the street planting area will also be planted with shrubs and ground cover plantings to the extent that forty (40) percent of the street planting area is planted with vegetation other than turf grass. Corner lots with frontage on more than one street must provide a street planting requirement along the entire street frontage.

b. Buffer Yard Screening

- (1) The Bufferyard shall include a fence with a minimum height of eight (8) feet.
- (2) All air-conditioning compressors will be roof mounted or screened and refuse collection must be kept in a dumpster, enclosed by a six (6) foot opaque, wood or masonry fence. Dumpsters may not be located in Bufferyards.

Section 10.102c Urban Design Overlay District Three – Government Street

A. Purpose

The purpose of the Government Street Urban Design Overlay District (District) is to strengthen the physical and economic character of the corridor by promoting and encouraging consistency in the quality of design within the area shown on the official zoning map, generally described as including lots fronting on Government Street from the east side of 11th Street to Jefferson Highway and lots fronting on Jefferson Highway from Government Street to Claycut Road/Goodwood Avenue.

B. Applicability

The provisions of this section shall apply to all development meeting the criteria established in Section 10.102.A, Enforcement and Review, as well as any expansion, reconstruction, or exterior renovation which requires the issuance of a building permit and involves 40 percent or more of an existing building or structure. An exterior renovation, expansion or reconstruction shall be calculated based upon the gross square footage under the roof.

C. Building Placement

1. Primary Frontage

Buildings shall be located on the primary street frontage, as determined by the Planning Director, according to one of the standards identified below.

- a. A minimum of 50 percent of the primary street frontage for each development shall have buildings within ten feet of the front property line with the principal entrance located on that frontage. When site constraints preclude strict compliance with this requirement, the building line shall be no more than one foot behind the line created by that constraint.

- b. Buildings may be located up to 20 feet behind the front property line if a courtyard providing seating is provided. The courtyard area shall include the use of plant materials in at least five percent of its area to better define the space and soften its appearance from the street.
- c. Buildings proposed to be developed on lots no more than 60 feet in width that abut properties that have been developed with buildings located behind the setback established above may be located to reflect the average setback of the abutting properties.
- d. Auto-oriented uses, such as gasoline sales, may be located further back on the lot than specified above, provided that a screen of evergreen plantings is provided. Such screen shall be between two and three feet in height within a planting area at least six feet in width.
- e. On a corner lot or a lot with frontages on multiple streets, the Planning Director shall determine the primary street frontage considering the following:
 - (1) The street classification of all streets;
 - (2) The prevailing orientation of other buildings in the area;
 - (3) The length of the block face on which the building is located; and,
 - (4) The location of any alley.

2. All Other Frontages

A minimum of 50 percent of all street frontages other than the primary frontage shall have buildings or walls or hedges, at least four feet in height, within ten feet of the respective property line.

D. Building Design

1. Primary Frontage

To provide visual connection between activities inside and outside the building, 40 percent of the building façade between two and ten feet in height, as measured from the adjacent sidewalk, shall be made of windows or doors that are transparent, the bottom of which may not be more than four feet above the adjacent sidewalk. Windows shall not be mirrored or have glass tinted darker than 40 percent in order to meet this requirement.

2. All Other Building Frontages

All other street-facing facades, other than those facing an alley, shall comply with either of the standards listed below.

- a. Thirty percent of the building façade between two and ten feet in height shall be made of windows or doors that are transparent, the bottom of which may not be more than four feet above the adjacent sidewalk. Windows shall not be mirrored or have glass tinted darker than 40 percent in order to meet this requirement.
- b. Have at least five of the following elements incorporated into the street-facing facade:
 - (1) Masonry (except for flat, non-decorative concrete block);

- (2) Concrete or masonry plinth at the base of the wall;
- (3) Belt courses of a different texture and color;
- (4) Projecting cornice;
- (5) Decorative tile work;
- (6) Medallions;
- (7) Opaque or translucent glass;
- (8) Artwork or wall graphics;
- (9) Lighting fixtures;
- (10) Green walls; or,
- (11) Architectural elements not listed above, if approved by the Planning Director.

3. Building Orientation

Buildings shall have their primary entrance oriented toward the primary street as determined by the Planning Director. The primary entrance shall be readily apparent as a prominent architectural component and visible from the street.

E. Site Design

1. Parking Areas

a. Surface Parking

All off-street surface parking shall be located to the side or rear of the primary building. Parking areas shall comprise no more than 40 percent of the street frontage of the lot or tract and, on corner lots, may not be located at the corner.

b. Structured Parking

(1) Parking structure facades.

Parking structure facades along street frontages shall complement and be integrated into the design of the principal building.

(2) Parking structure ground floor uses.

Active uses shall be required on 30 percent of the ground floor frontage of parking structures facing the street.

2. Pedestrian ways

Where a sidewalk(s), multi-use path(s), or public transportation stop exists on the perimeter of a lot, a designated pedestrian access way shall connect the sidewalk, path or transportation stop to the primary entrance of the building. Pedestrian paths to buildings through parking lots shall be a minimum of five feet wide and clearly marked with paint, paving material, or other physical identification.

2. Screening

Mechanical equipment and dumpsters shall be screened from view of all street frontages and adjacent properties with materials the same or a complimentary color

and/or style as the building. If located on the roof, mechanical equipment shall be screened from view of these areas at ground level using the same color and/or a style compatible with the building façade.

3. Signs

a. Permanent signage

(1) Types

Only the following types of signage shall be allowed:

- (a) Awning signs;
- (b) Canopy signs;
- (c) Marquee signs;
- (d) Monument signs;
- (e) Projecting signs;
- (f) Suspended signs; and,
- (g) Wall signs.

(2) Size

- (a) Monument signs shall be limited to a maximum of six feet in height.
- (b) All other signs shall be no more than one square foot of building sign per linear foot of building along primary street frontage provided that their lowest point is no higher than 20 feet above the ground; however, a minimum of 32 square feet of sign area shall be allowed.
- (c) Signs with their lowest point higher than 20 feet above grade may be as large as 10% of the total area of the building face on which they are located, provided that they do not block any windows or other openings of the building.

4. Lighting

a. Height

Light fixtures shall be no taller than the heights listed below:

- (1) 15 feet, for non-directional lighting
- (2) 30 feet, for directional (or full cut-off) lighting

b. Shielding

Light shall be shielded from adjacent properties to ensure that no more than 0.5 foot candles, as measured on a lighting plan, extend across the property line of adjacent residentially zoned properties and no more than five foot candles, as measured on a lighting plan, extend across the property line of all other adjacent properties.

c. Pedestrian Lighting.

Pedestrian lighting (free-standing or wall-mounted) shall be provided at one light for every 75 feet of street frontage or per an approved Pedestrian Lighting Plan.

5. Fences and Walls

a. Materials

Fences and walls, other than those required for screening, shall be constructed of wood, decorative metal, or masonry (other than unfinished or painted concrete block). The structural support members of wooden perimeter fences shall be located on the interior of the fence and shall not be visible from adjacent properties.

b. Height

Fences located in front yards may not be higher than four feet in height unless they are constructed to permit 50 percent visibility into the yard or are required for screening.

6. Pedestrian Amenities

Pedestrian amenities such as benches, trash receptacles, galleries, arcades, awnings, and outdoor seating may be allowed in the right-of-way subject to approval by the Development Director.

**Section 10.102d Urban Design Overlay District Four – Nicholson Drive, Old South
Baton Rouge**

A. Purpose

To provide guidelines for development activity in Urban Design Overlay District Four (District) as shown in Appendix G along Nicholson Drive from Chimes Street (to the south) to Interstate I-10 (to the north) and to strengthen the physical and economic character of the corridor by promoting and encouraging consistency in the quality of design and compatibility with the existing character of the area and the neighborhood residents' vision as emerged through the Old South Baton Rouge Revitalization Planning process.

The district boundaries as set forth in this Ordinance may be altered only with the affirmative vote of two-thirds (2/3) of the members of the Metropolitan Council voting at a meeting in which a quorum is present. The Planning Commission staff shall certify compliance with the District prior to the issuance of a building permit.

B. Enforcement and Review

1. New Construction

a. All developments within this district, with the exception of single family detached units, Infill/Mixed-Use Small Planned Unit Developments (ISPUDs), Small Planned Unit Developments (SPUDs), Planned Unit Developments (PUDs), and Traditional Neighborhood Developments (TNDs), shall also comply with the additional requirements set forth in this UDO Ordinance. Planning Commission staff shall certify compliance prior to issuance of building permits.

2. Existing Development

a. All lighting in Urban Design Overlay District 4 must comply with the current Lighting Ordinance (13384) within one (1) year from the date of approval of this Ordinance by the Metropolitan Council.

- b. All on premise signs in Urban Design Overlay District 4 must comply with the sign regulations imposed by this Ordinance and the Unified Development Code Sign Ordinance within five (5) years from the date of approval of this Ordinance by the Metropolitan Council.

3. Renovations and Additions

- a. Any renovation, expansion or reconstruction of forty (40) percent or more of an existing building or structure. A renovation, expansion or reconstruction shall be calculated based upon the gross square footage under the roof. Planning Commission staff shall certify compliance prior to issuance of Certificates of Occupancy.
- b. All developments within this district with the exception of single family detached units shall also comply with the additional requirements set forth in this Ordinance.

C. Waivers, Variances, and Exceptions

- 1. The district boundaries as set forth in this Ordinance may be altered only with the affirmative vote of two-thirds (2/3) of the members of the Metropolitan Council voting at a meeting in which a quorum is present.
- 2. Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for requirements for attaining sign permits in the District.

D. Dimensional Regulations

1. Building Siting and Orientation

- a. This section describes the architectural guidelines that aid in enhancing the spatial legibility and the overall aesthetics of the District.
- b. As highlighted in the Old South Baton Rouge Neighborhood and Economic Revitalization Strategy, Nicholson Drive has been divided into three distinct zones that will manifest unique development patterns: The North Zone will develop as a southern extension of the Catfish town attractions and entertainment district flanked by other uses such as residential, office, commercial, hospitality and tourism. The South Zone will continue to evolve as a higher quality, LSU student living and commercial district with mixed-use, apartments, lofts, and condominiums, which will also influence the Central Zone to transition from a single-family neighborhood to a slightly higher density townhome environment with a possibility of low-rise mixed-use apartment flats at the north end.
- c. Separate “Orientation, Siting, and Setback”, “Scale and Height”, “Parking and Access Accommodations”, and “Park and Open Space Accommodations” subsections apply specifically to each of the aforementioned Zones.
- d. North Zone
 - (i) Orientation, Siting, and Setback

- ! The general intent of the orientation, siting and setback standards for the North Zone is to encourage development that reinforces the urban grid of the neighborhood street and sidewalk system by maintaining a consistent building edge behind the right-of-way/parcel lines with

parking and servicing to the side and rear out of view. Outlined below are the relative setback standards by use and location:

- a. Pedestrian entrances and storefronts should be designed to orient to the block's street frontage. While side or rear entries may be needed, the predominant major building entry should be oriented toward the major street.
- b. The front building facade should be oriented parallel to the street or toward a major plaza or park.
- c. Buildings on corners along Nicholson Drive and on public open spaces should include storefront design features for at least fifty (50) percent of the ground floor wall area on the side street elevation.
- d. Commercial and mixed-use buildings along Nicholson Drive shall have a minimum front yard setback of ten (10) feet and a maximum of fifteen (15) feet from the public right-of-way and intersecting side street right-of-way.
- e. Commercial and mixed-use buildings along existing or new address streets shall have a minimum front yard setback of five (5) feet and a maximum of ten (10) feet from the public right-of-way and intersecting side street right-of-way.
- f. Commercial and mixed-use buildings having a publicly accessible arcade or porch structure, measuring between ten (10) feet and fifteen (15) feet in width, on the ground floor of the front façade, may be built directly behind the public right-of-way line on Nicholson Drive and its related side street corners.
- g. Commercial and mixed-use buildings having a publicly accessible arcade or porch structure, measuring between eight (8) feet and ten (10) feet in width, on the ground floor of the front façade, may be built directly behind the public right-of-way line on existing or new address streets.
- h. Buildings exceeding four stories in height must step the upper floor facades (on the street side) an addition fifteen (15) feet for a total setback of twenty-five (25) feet minimum to thirty (30) feet maximum, depending on the initial ground level building setback below.
- i. Multifamily residential buildings along Nicholson Drive shall have a minimum front yard setback of ten (10) feet and a maximum of fifteen (15) feet from the public right-of-way and intersecting side street right-of-way.
- j. Multifamily residential buildings along existing or new address streets shall have a minimum front yard setback of ten (10) feet and a maximum of fifteen (15) feet from the public right-of-way and intersecting side street right-of-way.
- k. On-site surface parking bays running parallel with Nicholson Drive or proposed address streets shall be setback a minimum of six (6) feet and maximum of eight (8) feet from the public right-of-way to accommodate adequate screening for the parking lot.
- l. On-site, mid-block parking bays running perpendicular to Nicholson Drive or a proposed address street shall be setback a minimum of ten (10) feet and maximum of fifteen (15) feet to accommodate entry parking islands.
- m. All structures shall be setback in accordance with the sections illustrated in Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center.

- n. There shall be a thirty (30) feet minimum separation between multifamily residential buildings.

(ii) Scale and Height

- ! The general intent of the height and scale standards for the North Zone is to encourage development that is a minimum of two stories and a maximum of eight-stories, with accompanying roof structures that are no more than one additional story in height allowing for rooftop utilities and potential dormered loft spaces. Outlined below are the relative height standards by use and location:

a. North Nicholson Zone – North of Oklahoma Avenue

- i. Multi-family residential buildings on Nicholson Dr. or an “Address Street” must be four stories or forty-five (45) feet minimum and are permitted to be eight stories or ninety (90) feet maximum to the top plate height.
- ii. Mixed-use buildings with retail on the ground level and residential above must be four stories or fifty (50) feet minimum and are permitted to be eight stories or ninety-five (95) feet maximum to the top plate height.
- iii. Commercial/office buildings must be four stories or fifty (50) feet minimum and are permitted to be eight stories or ninety-five (95) feet maximum to the top plate height.
- iv. Ancillary structures must be two stories or twenty-five (25) feet minimum height provided that two- story structures shall be employed only as supporting elements that are integral to larger building masses on site.
- v. Parking Structures are permitted to a maximum height of fifty (50) feet to the top of screen wall parapet.
- vi. In lower elevation, flood prone areas homes and businesses must be elevated one (1) foot above the minimum Base Flood Elevation and constructed in a manner that flood water is not displaced on another property owner by excessive filling. The structure should be elevated with open pier or wall and flood louver construction to allow the substructure to flood during storm events without impact or damage to the principal structure or neighboring structures.
- vii. The height limit for each building and parking structure shall be in conformance with the approved Unified Development Code and District guidelines.

b. North Nicholson Zone – South of Oklahoma Avenue

The general intent of the height and scale standards for the North Zone is to encourage development that is a minimum of four stories and a maximum of eight stories, with accompanying roof structures that are no more than one additional story in height allowing for rooftop utilities and potential dormered loft spaces. Outlined below are the relative height standards by use and location:

- i. Multi-family residential buildings on Nicholson Drive or an “Address Street” must be three stories or thirty-five (35) feet

- minimum and are permitted to be four stories or forty-five (45) feet maximum to the top plate height.
- ii. Townhome buildings on Nicholson Drive or an “Address Street” must be three stories or thirty-five (35) feet minimum and are permitted to be four stories or forty-five (45) feet maximum to the top plate height.
- iii. Mixed-use buildings with retail on the ground level and residential above must be three stories or forty (40) feet minimum and are permitted to be four stories or fifty (50) feet maximum to the top plate height.
- iv. Commercial office buildings must be three stories or forty (40) feet minimum and are permitted to be four stories or fifty (50) feet maximum to the top plate height.
- v. Ancillary structures must be two stories or twenty-five (25) feet minimum height provided that two- story structures shall be employed only as supporting elements that are integral to larger building masses on site.
- vi. Parking structures must be two to three levels with a maximum height of thirty-five (35) feet to the top of screen wall parapet.
- vii. In lower elevation, flood prone areas homes and businesses must be elevated one (1) foot above the minimum Base Flood Elevation and constructed in a manner that flood water is not displaced on another property owner by excessive filling. The structure should be elevated with open pier or wall and flood louver construction to allow the substructure to flood during storm events without impact or damage to the principal structure or neighboring structures.
- viii. The height limit for each building and parking structure shall be in conformance with the approved Unified Development Code and this ordinance’s guidelines.

(iii) Parking and Access Accommodations

- ! The general intent of the parking and access siting standards for the North Zone is to encourage both surface and structured parking design and layout that minimizes the visual impact on surrounding developments and the public realm. Outlined below are the relevant parking and access standards by location:
 - a. All surface parking shall be located at the rear of the buildings they serve.
 - b. Mid-block and corner parking oriented to the side of the building it serves is permitted with the approval of Planning Commission staff.
 - c. One surface parking access point per block face per development shall be permitted along Nicholson Drive and all adjoining side streets.
 - d. Required parking may be accommodated under the rear of residential structures if it is screened from the public right-of-way.
 - e. Surface parking must be configured to allow adequate service truck access to trash, recycling and utility services areas of a building.

- f. Free standing parking lots shall be setback a minimum of fifteen (15) feet and a maximum of twenty (20) feet from the rear façade of retail, commercial or mixed-use structures (unless the parking is incorporated into the ground floor of the structure).
- g. Free standing parking lots shall be setback a minimum of ten (10) feet and a maximum of fifteen (15) feet from the rear façade of multi-family residential structures (unless the parking is incorporated into the ground floor of the structure).
- h. One parking structure access point per block face shall be permitted along Nicholson Drive.
- i. Parking structures may include a green roof deck for density bonus consideration by the Planning Commission. (See Appendix K – Stormwater BMP Manual)
- j. Underground parking structures are optional.

(iv) Park and Open Space Accommodations

- ! The general intent of the park and open space standards for the North Zone is; first, to encourage the preservation of mature vegetation in the area and reestablish the “Civic Boulevard” character that has been lost along the Nicholson Corridor; second, to establish a greenway along the northern portion of the Corporation Canal as parcels are redeveloped; and third, to establish a designated portion of the North Zone as a large public gathering and event space for the citizens of Old South Baton Rouge. Outlined below are the relevant park and open space standards by location:
- ! A twenty-five (25) feet minimum building and parking setback, measured from the centerline, on the west side of the Corporation Canal from Interstate 10 to Van Buren Street must be respected and all existing mature, healthy vegetation must be preserved and documented within this zone.

e. Central Zone

(i) Orientation, Siting, and Setback

- ! The general intent of the orientation, siting and setback standards for the Central Zone is to encourage development that reinforces the pastoral qualities of the Nicholson Drive tree lined boulevard and the Magnolia Mound Plantation. This can be achieved by maintaining the large green setback along both sides of Nicholson Drive as a park like setting for low scale residences framing small scale interior streets and parking spaces, with convenient on-street visitor parking and resident parking to the rear of the homes out of view. Outlined below are the relative setback standards by use and location:
- a. Attached Townhome Buildings along interior streets and mews shall have a minimum setback of five (5) feet and a maximum of fifteen (15) feet from the public right-of-way or from the back of sidewalk on a private street or internal green space.
- b. There shall be a twenty (20) feet minimum separation between attached residential townhome buildings.
- c. Mixed-use buildings along Nicholson Drive shall have a minimum front yard setback of fifty (50) feet and a maximum of ten (10) feet

from the public right-of-way and intersecting side street right-of-way.

- d. Buildings on corners along Nicholson Drive and on public open spaces should include storefront design features for at least fifty (50) percent of the ground floor wall area on the side street elevation.
- e. Pedestrian entrances and storefronts should be designed to orient to the block's street frontage. While side or rear entries may be needed, the predominant major building entry should be oriented toward the major street.
- f. The front building facade should be oriented parallel to the street or toward a major interior plaza or park.
- g. Multifamily residential buildings along Nicholson Drive shall have a minimum front yard setback of fifty (50) feet and a maximum of fifty-five (55) feet from the public right-of-way and a minimum side street setback of ten (10) feet from the right-of-way.
- h. There shall be a thirty (30) feet minimum separation between multi-family residential or mixed-use buildings.
- i. All structures shall face onto either a roadway or internal open space. Structures are not permitted to side or back onto Nicholson Drive.
- j. All structures shall be setback in accordance with the sections illustrated in Exhibits 14 through 18 in the Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center.

(ii) Scale and Height

- ! The general intent of the height and scale standards for the Central Zone is to encourage development that is a minimum of two stories and a maximum of three (3) stories, with accompanying roof structures that are no more than one additional story in height allowing for rooftop utilities and potential dormered loft spaces. Outlined below are the relative height standards by use and location:

- a. Multi-family residential buildings along Nicholson Drive and internal to the site, as illustrated in Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center, are permitted to be three stories or thirty-five (35) feet maximum to the top plate height.
- b. Multi-family residential buildings on Nicholson Dr. or an "Address Street" must be two stories or twenty-five (25) feet minimum and are permitted to be three stories or thirty-five (35) feet maximum to the top plate height.
- c. Townhome buildings along Nicholson drive and interior to the site are permitted to be three stories or thirty-five (35) feet maximum to the top plate height.
- d. Townhome buildings on side streets are permitted to be three stories or thirty-five (35) feet maximum to the top plate height.
- e. Mixed-use buildings with retail on the ground level and residential above must be three stories or forty (40) feet maximum to the top plate height.
- f. Ancillary structures must be a one story or fifteen (15) feet minimum height provided that single story structures shall be

employed only as supporting elements that are integral to larger building masses on site.

- g. The height limit for each building and parking structure shall also be in conformance with the approved Unified Development Code and these District guidelines.
- h. In lower elevation, flood prone areas businesses must be elevated above the minimum Base Flood Elevation and constructed in a manner that flood water is not displaced on another property owner by excessive filling. The structure should be elevated with open pier or wall and flood louver construction to allow the substructure to flood during storm events without impact or damage to the principal structure or neighboring structures.

(iii) Parking and Access Accommodation.

! The general intent of the parking and access siting standards for the Central Zone is to encourage both surface parking that minimizes the visual impact on surrounding developments and site access that minimizes the vehicular conflicts along Nicholson Drive and neighboring, intersecting streets. Outlined below are the relevant parking and access standards by location:

- a. Private resident parking shall be located and accessed with an alley to the rear of multifamily or commercial buildings and consist of a garage integral to the residence, a freestanding garage or a parking pad.
- b. Freestanding garages shall be placed a minimum of five (5) feet and maximum of ten (10) feet from the alley right-of-way to allow for proper turning movements from the alley cartway.
- c. All surface parking for multi-family or Mixed-use buildings shall be located at the rear of the buildings they serve.
- d. One shared parking access point per block face shall be permitted along all adjoining side streets; however, no direct parking lot access is permitted off of Nicholson Drive.
- e. Alleys and parking driveways at the rear of mixed-use or residential buildings with parking below shall be set back a minimum of five (5) feet and a maximum of ten (10) feet from the rear façade to allow for proper turning movements from the alley cartway.
- f. On-street parallel parking within public rights of way or private street easements.
- g. Visitor parking shall be provided within the on-street parking spaces.
- h. Required parking may be accommodated under the rear of residential structures if it is screened from the public right-of-way (Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center).
- i. Free standing parking lots shall be setback a minimum of fifteen (15) feet and a maximum of twenty (20) feet from the rear façade of multi-family residential structures (unless the parking is incorporated into the ground floor of the structure).
- j. No parking structures are permitted within the Central Zone area.
- k. Streets and alleys must be configured to allow adequate service truck access to trash, recycling and utility services areas of a building.

- l. Semi-transparent fences are allowed, but are limited to three (3) feet in height (e.g., wood picket and decorative metal fences).
- m. Six (6) foot high privacy fences may be allowed in rear and side yards. Privacy fencing is not permitted to extend forward from the back of the structure toward the front of the house and/or street.

(iv) Park and Open Space Accommodations

- ! The general intent of the park and open space standards for the Central Zone is to encourage the preservation of mature vegetation and the pastoral character along the Nicholson Corridor and its surrounding large lot sites. The large open spaces, mature trees and heritage of the area is what makes this portion of Nicholson unique and thus development in this area must be held to a higher standard than revitalization areas to the north and south. Outlined below are the relevant park and open space standards by location:
 - a. A fifty (50) feet building setback on the west and east sides of Nicholson Drive must be respected and all existing mature, healthy vegetation must be preserved and documented within this zone.
 - b. All proposed development sites along Nicholson Drive between Garner Avenue and Johnson Street must have a detailed tree surveyed prepared for the site indicating the species and health of any mature tree over six (6) inches in diameter at breast height (DBH).
 - c. Twenty (20) percent of any development site must be kept in dedicated open space, preferably located around existing mature trees and directly across Nicholson Drive from the Magnolia Plantation House as illustrated in Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center.

f. South Zone

(i) Orientation, Siting, and Setbacks

- ! The general intent of the orientation, siting and setback standards for the South Zone is to encourage development that reinforces the urban grid of the neighborhood street and sidewalk system by maintaining a consistent building edge behind the right-of-way/parcel lines with parking and servicing to the side and rear out of view. Outlined below are the relative setback standards by use and location:
 - a. Pedestrian entrances and storefronts should be designed to orient to the block's street frontage. While side or rear entries may be needed, the predominant major building entry should be oriented toward the major street.
 - b. The front building façade should be oriented parallel to the street or toward a major plaza or park.
 - c. Buildings on corners along Nicholson Drive and on public open spaces should include storefront design features for at least fifty (50) percent of the ground floor wall area on the side street elevation.

- d. Commercial buildings along Nicholson Drive shall have a minimum front yard setback of fifty (50) feet and a maximum of ten (10) feet from the public right-of-way and intersecting side street right-of-way.
- e. Mixed-use buildings along Nicholson Drive shall have a minimum front yard setback of five (5) feet and a maximum of ten (10) feet from the public right-of-way and intersecting side street right-of-way.
- f. Commercial and mixed-use buildings having a publicly accessible arcade or porch structure, measuring between eight (8) feet and ten (10) feet in width, on the ground floor of the front façade, may be built directly behind the public right-of-way line on Nicholson Drive and its related side street corners (Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center).
- g. Multifamily residential buildings along Nicholson Drive shall have a minimum front yard setback of ten (10) feet and a maximum of fifteen (15) feet from the public right-of-way and intersecting side street right-of-way.
- h. On-site surface parking bays running parallel with Nicholson Drive shall be setback a minimum of six (6) feet and maximum of eight (8) feet from the public right-of-way to accommodate adequate screening for the parking lot. (Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center).
- i. On-site, mid-block parking bays running perpendicular to Nicholson Drive shall be setback a minimum of ten (10) feet and maximum of fifteen (15) feet to accommodate a parking island (Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center).
- j. All structures shall be setback in accordance with the sections illustrated in Exhibits 20 through 25 located in the Planning Commission office.
- k. There shall be thirty (30) feet minimum separation between multifamily residential buildings.

(ii) Scale and Height

- ! The general intent of the height and scale standards for the South Zone is to encourage development that is a minimum of two stories and a maximum of four-stories, with accompanying roof structures that are no more than one additional story in height allowing for rooftop utilities and potential dormered loft spaces. Outlined below are the relative height standards by use and location:
 - a. Multi-family residential buildings on side streets are permitted to be three stories or thirty-five (35) feet maximum to the top plate height.
 - b. Multi-family residential buildings on Nicholson Dr. or an “Address Street” are permitted to be four stories or forty-five (45) feet maximum to the top plate height.
 - c. Townhome buildings on side streets are permitted to be three stories or thirty-five (35) feet maximum to the top plate height.

- d. Mixed-use buildings with retail on the ground level and residential above are permitted to be four stories or fifty (50) feet maximum to the top plate height.
- e. Commercial buildings are permitted to be three stories or twenty-five (25) feet maximum to the top plate height.
- f. Ancillary structures must be a one story or fifteen (15) feet minimum height provided that single story structures shall be employed only as supporting elements that are integral to larger building masses on site.
- g. Parking structures must be two to three levels with a maximum height of thirty-five (35) feet to the top of screen wall parapet.
- h. In lower elevation, flood prone areas businesses must be elevated one (1) foot above the minimum Base Flood Elevation and constructed in a manner that flood water is not displaced on another property owner by excessive filling. The structure should be elevated with open pier or wall and flood louver construction to allow the substructure to flood during storm events without impact or damage to the principal structure or neighboring structures.

(iii) Parking and Access Accommodations

- ! The general intent of the parking and access siting standards for the South Zone is to encourage both surface and structured parking design and layout that minimizes the visual impact on surrounding developments and the public realm. Outlined below are the relevant parking and access standards by location:
 - a. All surface parking shall be located at the rear of the buildings they serve.
 - b. Mid-block and corner parking oriented to the side of the building it serves is permitted with the approval of Planning Commission staff and if designed and implemented per the parking templates illustrated in Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center.
 - c. One shared parking access point per block face shall be permitted along Nicholson Drive and all adjoining side streets.
 - d. Required parking may be accommodated under the rear of multifamily structures if it is screened from the public right-of-way.
 - e. Surface parking must be configured to allow adequate service truck access to trash, recycling and utility services areas of a building.
 - f. Free standing parking lots shall be setback a minimum of seven (7) feet and a maximum of ten (10) feet from the rear façade of retail, commercial or mixed-use structures (unless the parking is incorporated into the ground floor of the structure).
 - g. Free standing parking lots shall be setback a minimum of fifteen (15) feet and a maximum of twenty (20) feet from the rear façade of multi-family structures (unless the parking is incorporated into the ground floor of the structure).
 - h. One parking structure access point per block face shall be permitted along Nicholson Drive.

- i. Where possible, parking structures must be centrally located within a development block and shall not be visible from surrounding streets.
- j. Parking structures may include a green roof deck for density bonus consideration by the Planning Commission. (See Appendix K)

E. Utilities

1. Lighting

- a. Adequate lighting is essential to both the business community and residents, because it increases visibility and security. The following are general requirements and recommendations which should be met when designing for lighting in the public realm and private development projects.
- b. Light Fixture Design Standards
 - (i) A coordinated hierarchy and diversity of lighting and intensities is required to maximize the quality of the nighttime environment within the District area to guide pedestrians and motorists through the Nicholson Drive area and accent special features. Special features may include but are not limited to, the Magnolia Mount Plantation, parks, courtyards, building entrances, pathways, and open spaces. This hierarchy and diversity shall respond to the relative enclosures, spaces, plant and building materials along with building heights and architectural features.
- c. Lighting design criteria shall apply to:
 - (i) Nicholson Drive
 - (ii) Private Streets, Alleys, and Access Drives
 - (iii) Pedestrian and Landscaped Areas
 - (iv) Natural Open Spaces and Trails
 - (v) Motor/Pedestrian Courts and Plazas
 - (vi) Surface Parking Areas
- d. Public streets within the District shall be illuminated using pedestrian-scale lighting of twelve (12) feet to fourteen (14) feet pole height with a controlled light distribution pattern.
- e. Private streets, alleys, and access drives shall use pole-mounted lighting to be compatible with the adjacent architecture. Landscape up-light and down-light accents shall be provided, where appropriate. In a fashion similar to public streets, those streets and alleys which are intended to serve a dual use for occasional “festival” activities and “outdoor markets” shall include supplemental lighting and appropriate electrical conduit and service connections to fulfill this purpose.
- f. A lighting plan shall be prepared for all proposed developments of thirty thousand (30,000) square feet or larger. The plan shall provide both vertical and horizontal illumination levels.
- g. A white-colored light source shall be used to give a truer rendition of the existing surfaces that are being illuminated. Lighting in pedestrian plazas, pedestrian connections and sitting areas shall provide reasonable levels of nighttime visibility.

Accent lighting shall be used at special locations such as stairs, entry signage, and sculpture.

- h. Light fixture illumination at motor courts shall be provided from indirect sources such as landscape, bollard lights, accent up lighting and down lighting. Where used, pole-mounted sources shall have a controlled cutoff reflector and shall match public street lighting fixtures. Light sources shall produce a white light. Colored lenses are prohibited. Lighting shall be positioned and/or screened to minimize light spillover to adjacent sites and communities.
- i. Except for any hotels and restaurants, flood lighting of building exteriors shall be prohibited without the approval of Planning Commission staff. An illumination impact plan may be required by Planning Commission staff prior to building approval.
- j. The proposed Central Zone park and neighborhood park areas shall be illuminated similar to private pedestrian landscape areas. Illumination intensities shall be greater than minimal standards to ensure nighttime “vibrancy” in and around the area. Motor courts will receive some illumination from adjacent buildings. Additional lighting within courtyards shall be provided by hidden source landscape up-light and down-light accents. Those areas that are intended to serve “festivals” and “outdoor markets” shall include supplemental lighting and appropriate electrical conduit and service connections.

F. Streets and Sidewalks

1. Motor Courts and Pedestrian Courts

- a. Materials shall indicate to motorists that they have entered a pedestrian area. One or more materials may be used as the dominant material for motor court paving including:
 - (i) Integrally colored concrete with special accent bands.
 - (ii) Pre-cast concrete unit pavers.
 - (iii) Rustic terrazzo (integral exposed aggregate concrete).
 - (iv) Clear or stress finished concrete, with special jointing patterns and accent bands of another material.
 - (v) Stone and/or brick pavers.
 - (vi) Imprinted paving patterns, such as stamped concrete.
- b. Header curbs are required at the edge of all motor court vehicular driving surfaces to separate vehicular travel ways from pedestrians. They shall be constructed of concrete or stone. Bituminous curbs are not permitted.

2. Curb Cuts

- a. Curb cuts shall be kept to a minimum of one per block face per development. The Planning Director may grant one additional curb cut per block face not fronting on Nicholson Drive for developments that utilize structured parking.

3. Sidewalks

- a. Site and Building Integration

- (i) Adequate and safe sidewalks and areas of pedestrian circulation from street and parking areas shall be provided. The sidewalks and circulation areas must be a minimum of five (5) feet in width and distinguished from vehicle use areas by using colored pavement, brick, alternative pavements and/or landscaping. Pervious hardscape materials should be preferred over impervious where feasible to help reduce stormwater runoff speed and quantities.
- b. Circulation
 - (i) The previous section describes the goals for ground level pedestrian and vehicular circulation. Planning Commission staff shall ensure that an integrated system of through building passages, garage connections, pedestrian concourses, and covered walkways completes the overall circulation system.
- c. Private sidewalks
 - (i) Private walkways shall be provided by individual developers and property owners and connect to both existing and proposed sidewalks, motor courts, buildings, and public spaces within neighboring developments.
 - (ii) Covered walkways shall be provided by individual developers and/or property owners at building entries and porte-cocheres. Sidewalk connections shall also be provided to buildings and their parking lots. These widths may vary depending on site constraints.
 - (iii) Consistent graphics and lighting programs shall be used to identify all private walkways. Bituminous paving shall not be used in sidewalk areas as this does not complete the existing concrete walks and the proposed streetscape improvements.
- d. Public Sidewalks and Associated Streetscapes
 - (i) Consistent graphics and lighting programs shall be used to identify public sidewalks. Bituminous paving shall not be used in sidewalk areas. Where appropriate pervious pavement materials should be preferred over impervious materials for any private sidewalk to help reduce stormwater runoff speed and quantities.
- e. Crosswalks
 - (ii) Pedestrian crosswalks in the District should be consistent in layout and design; however, the materials used for implementation may differ between crossings. The surface treatment of crosswalks will vary depending on the types of streets of which it is comprised. In areas where a more elaborate streetscape crosses one that is less so, the crosswalk treatment should respond to the more elaborate of the two. Thus, where a brick streetscape crosses a concrete streetscape, the crosswalks should match the brick.
 - (iii) The dimensions for crosswalks may also vary from street to street. It is generally desirable to align the outer limits of crosswalks with the building facades or rights-of-way of the two intersecting streets. The inner limits of the crosswalks are then defined by adopting standard dimensions for crossing widths (ranging from ten (10) feet to fifteen (15) feet or equal to the

sidewalk/right-of-way width. This approach allows the streetscape to continue visually across the street. However, this approach does not always work due to misaligned building facades, curvilinear streets or misaligned streets. In such cases it is best to run crosswalks parallel to a line projected from face of curb to face of curb from the misaligned roadways.

- (iv) Street crosswalks are desirable across all public streets, private vehicular access ways, motor courts and service drives located between parking areas and building entrances. To enhance public safety, minimize crossing conflicts and provide visual cues to both pedestrians and motorists, all pedestrian street crossing shall be well defined. Articulating crosswalks through contrasting unit paving materials and painted striping will provide a designated path for pedestrians.

f. Paving Materials

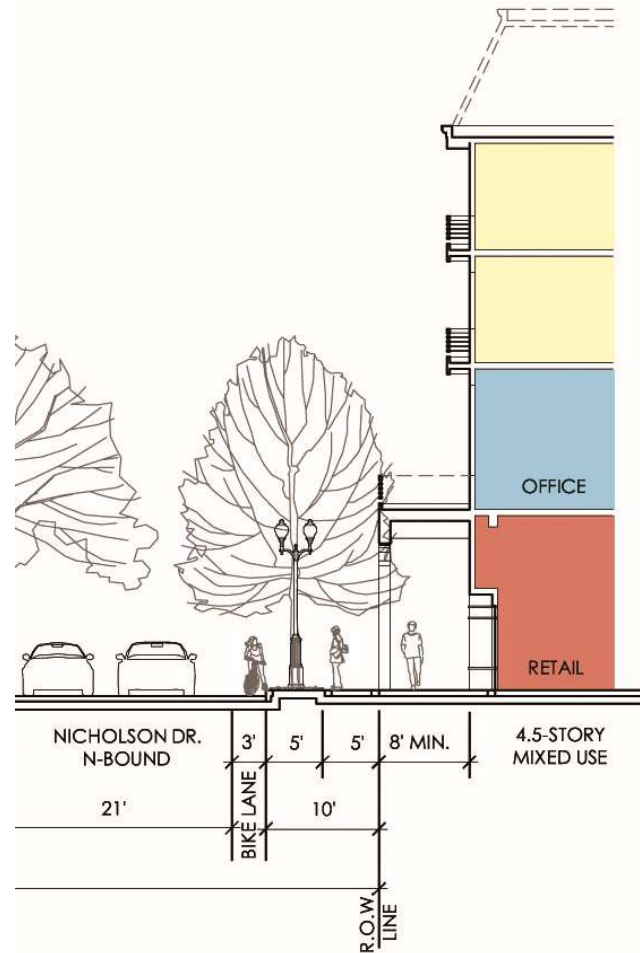

- (i) Sidewalk paving materials should be reviewed and approved by Planning Commission staff and where appropriate pervious materials should be used instead of impervious.

4. Streetscape Amenities

- a. Benches, tables and chairs are encouraged within all future public enhancement and private development projects in the District. Color and style should complement and be coordinated with the building and paving materials. Construction should be of contoured, recycled wood, plastic or metal with the frame and/or end members constructed of heavy metal for quality and durability.
- b. Trash receptacles are required in public plaza areas, open green spaces, parks, bus stops, highly trafficked street corners and other sections of the Nicholson Avenue UDOD where people will congregate. Trash receptacles should also be located outside of food service facilities and convenience stores. They should not be placed where they would interfere with pedestrian or ADA movement.
- c. Approved materials are stone, pre-cast concrete, and metal. To the extent feasible, trash receptacle colors and materials shall complement and be coordinated with adjacent buildings and other site furnishings.
- d. Planning Commission staff reserves the right to review and approve all street and hardscape furnishings. Additional recommendations are presented for each of the specific streetscape and site furnishing items above in Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center.

5. Bikeways

- a. Roadway surfaces must be designed to accommodate bicyclists and should connect to the surrounding existing and planned bicycle systems and link LSU, downtown, the riverfront, parks, open spaces, schools, libraries, civic buildings and neighborhoods within the area. Bike lanes shall meet all local transportation and state regulations. Bikeway lanes shall be properly located along Nicholson Drive and Address Streets. Accommodations for bicyclists should be primarily for the recreational or leisure cyclist. Traveling at relatively slow speeds, the cyclists will likely make frequent stops along roadways within the District. Therefore, bike racks should be located at various locations throughout downtown to provide safe and convenient temporary storage. Areas that are designated for bicyclists should use paving materials that are smooth and free of obstruction. There must be a clearly designated separation between bicycle zones and vehicular areas. This separation can visually be established by using varying colors or materials, where possible.

6. Transit

- a. Bus stops are already located along Nicholson Drive. At full development of the Nicholson Drive Area and in light of the growing student population a higher use of the public transit should be expected. The bus stop shelters shall be specified and coordinated with the character of the adjacent architecture and streetscape furnishings. The design and location of all bus facilities, including bus parking, on private property shall be approved by Planning Commission staff.
- b. Developments with more than four hundred (400) feet of Frontage at designated CATS bus stops may construct a bus shelter which is architecturally compatible with the primary building and may be eligible for a credit against traffic impact fees as determined by the Department of Public Works.

G. Signs

1. Abandoned

- a. Whenever a sign becomes structurally unsafe, as determined by the East Baton Rouge Parish building official and/or the Planning Commission, or endangers the

safety of a structure, premises or the public, or is erected or maintained in violation of these design guidelines and the City's zoning ordinance, or is abandoned or the use with which it is associated is abandoned or discontinued, the Planning Director and/or the Planning Commission may, by the issuance of a violation notice and correction order, order such sign to be made safe and comply with these guidelines and the City's ordinance, or be removed.

- b. If the cost of repairing a sign exceeds fifty (50) percent of the sign's value, it shall be removed and the replacement sign shall conform to these design guidelines and the City's zoning ordinance. The more restrictive requirements between the two documents shall apply.
- c. Failure to comply with the notice shall constitute grounds for the Planning Director and/or the Planning Commission to have the sign removed, and the cost thereof shall be borne by the person so notified as an addition to any fine imposed by a court of law for a violation of this chapter. If the cost is not paid as an addition to a fine, the Parish may seek to recover such cost by any means allowed at law or equity.

2. Calculations

- a. Developments with one-hundred (100) feet or less of frontage may only utilize wall, canopy, awning or projecting signs. All signs must be attached to the building.
- b. Developments with more than one-hundred (100) feet of frontage with a building setback of at least fifteen (15) feet may utilize a monument sign not to exceed six (6) feet in height and thirty-six (36) square feet per face.
- c. Developments with more than one hundred (100) feet and less than two hundred (200) feet of frontage, with a building setback of at least fifteen (15) feet, may utilize a monument sign not to exceed six (6) feet in height and thirty-six (36) square feet per face.
- d. Developments with more than two hundred (200) feet of frontage may utilize a monument sign not exceeding ten (10) feet in height and seventy-five (75) square feet per face.
- e. Signs to be located within proposed public right-of-way must receive approval from Planning Commission staff.

3. Prohibited Signs

- a. Pole signs, changeable letter signs (except as part of an identification sign), and flagging are prohibited.

4. Illumination

- a. An allowed sign may not flash, blink or fluctuate, nor be animated.
- b. Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for requirements concerning non-illuminated signs in the District.

5. Non-Illumination Signs

- a. Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for requirements concerning illuminated signs in the District.

6. Temporary Signs

- a. Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for requirements concerning temporary signs in the District.

7. Permanent On-Premise Signs By Type

a. Monument Signs

- (i) One monument sign is allowed per frontage.

b. Changeable Letter Signs

- (i) One restaurant preview and menu board per site shall be permitted, and will be no greater than three (3) feet in height and four (4) feet in length.

c. Wall Signs

- (i) Wall signs cannot exceed thirty-six (36) square feet in sign area.
- (ii) Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for requirements concerning Building-Mounted Signs in the District.

d. Canopy, Awning Signs, and Projecting Signs

- (i) Canopy, awning and projecting signs are not to exceed twelve (12) feet in length.

e. Public Signs

- (i) Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for requirements and recommendations concerning public signs in the District.

f. Small Regulatory Signs

- (i) Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for requirements concerning small regulatory signs in the District.

g. Tenet Directory Signs

- (i) Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for requirements concerning tenant directory signs in the District.

h. Public Flags

- (i) Patriotic flags such as the flag of Baton Rouge, the State of Louisiana, United States Armed Forces, the United States of America, and corporate and

nonprofit organization flags used in conjunction with patriotic flags shall be permitted. Corporate flags, nonprofit organization flags, and patriotic flags shall be limited to one each per lot and shall not be larger than six (6) feet by ten (10) feet. Oversized flags shall not be permitted. Flags shall be sized in accordance with pole height as follows:

Pole height in feet	Flag dimension in feet
15	3 by 5
20-25	4 by 6
30-35	5 by 8
40	6 by 10

Note: Pole heights over 40 feet are not permitted.

8. Off Premise Signs

- a. The following guidelines shall be applied to all off-premise signs in the District:
 - (i) In the South Zone (West Chimes Street to West McKinley Street), new off-premise signs can only be erected if an existing sign, including structure, is removed. New off-premise signs cannot exceed three hundred (300) square feet per face and must meet current Unified Development Code requirements.
 - (ii) In the Central Zone (West McKinley Street to Garner Street), off-premise signs are prohibited.
 - (iii) In the North Zone (Garner Street to Interstate 10), off-premise signs cannot exceed three hundred (300) square feet per face and must meet current Unified Development Code requirements.
- b. Motor vehicles (including but not limited to trucks, buses, vans, automobiles and tractors) containing any type of sign (other than painted name, logo, and business information on a commercial vehicle) shall not be parked or placed in any zoning district within sight distance of a public street, easement or private road. This prohibition shall not apply to overnight parking of vehicles.
- c. Except for public signs or locational advertising signs, all signs shall be located within respective property lines of the parcel on which the use or activity being advertised is located, and shall not project into any public right-of-way, existing or proposed to be dedicated by the landowner, unless approved as provided by subsection (a) hereafter when located on right-of-way immediately abutting the advertiser's premises. Such signs and their locations shall not obstruct or interfere with traffic, sighting distance, signals and public signs.

9. Design Intent

- a. The complex needs and functions of a mixed-use corridor require an integral sign system to direct, orient, identify, and inform. It also facilitates pedestrian and vehicular movement through and around the community.
 - (i) All site signs shall be coordinated with a consistent style throughout the development project. Site signs shall be high quality and maintain a uniform color scheme, material, and design. A unifying logo shall relate the signs to one another.

- (ii) Primary entrance signs identifying the overall development can occur at key locations where internal roadways intersect main roads. These signs will be determined by the Developer and reviewed and approved by the Planning Commission staff. These signs shall be architecturally compatible and be consistent with the buildings in the development.
- (iii) Secondary entrance signs identifying specific buildings or tenants shall occur at key parking facility entryways. These signs shall be of small monument style and consistent with the primary entrance signs.
- (iv) Directional signs indicate locations of tenants, facilities, amenities, and other important locations. They shall be designed in scale to accommodate vehicles and pedestrians.
- (v) Regulatory signs will indicate handicapped parking, loading zones, fire lanes, and other service-related components. These signs shall be kept to a minimum and be consistent with the overall sign system whenever possible and shall conform to the height, information and color standards of East Baton Rouge Parish and the State of Louisiana. Sign faces shall be of approved materials, but sign backs and posts shall be painted in a color consistent with the theme of the overall project. Post shall be round or rectangular tube steel; "Channel" posts are not allowed.

H. Parking

1. Off- Street Parking

- a. Surface parking lots, if properly designed and screened, can contribute to the urban character of a district and provide an attractive pedestrian environment. A low evergreen hedge and fence or masonry wall will screen wheels, bumpers and paving, thereby eliminating the harshest visual aspects of the parking lot, while also providing for surveillance and security.
- b. All parking areas must be located at the rear or to one side of the primary building or structure. The main entrance must be visually and physically accessible from the public sidewalk and street.
- c. On corner lots, no parking areas may be located between the building or the two (2) front property lines.
- d. The landscape bed for the parking lots screening must be a minimum of six (6) feet wide and contain a continuous evergreen hedge or masonry wall with a maximum height of thirty (30) inches.
- e. Any parking area containing twenty-five (25) or more spaces shall include sunken parking islands with curb cuts or drains that would allow channelization of stormwater to vegetation planted within the island. (See Appendix K)
- f. Rooftop parking is encouraged and should be utilized if possible.
- g. Shared drive-ways and parking areas are encouraged to minimize the number of curb cuts along Nicholson Avenue.
- h. Cross access easements between parking lots are encouraged in site plan review.

- i. Existing properties that are further subdivided must utilize shared parking and shared street entrances, which shall be shown on the final plat.
- j. At-grade parking areas, as well as medians, will be graded to ensure the preservation of existing vegetation as close as possible to the edge of the parking lot.
- k. A maximum side slope of two to one (2:1) will be allowed provided that such slopes are planted in groundcover.
- l. The maximum slope for lawn areas shall be three to one (3:1). A maximum slope and cross slope of five (5) percent is allowed within the surface parking areas, and a minimum ten (10) foot buffer will be allowed between buildings and surface parking lots.
- m. Landscaped medians will also be provided between parking areas and service drives.
- n. There shall be a ten (10) foot minimum buffer between the rear of buildings and the surface parking. Within this buffer there shall be a minimum five (5) foot landscape planting buffer adjacent to the building with a sidewalk of five (5) foot minimum width adjacent to the parking area.
- o. Interior parking shall provide adequate turnaround areas for emergency and delivery vehicles.
- p. Individual off-site parking spaces within commercial areas shall not have direct individual access to any public street other than for parallel parking.
- q. All parking lot entrances shall be marked with painted pedestrian crossings.
- r. Access locations from the street to the surface parking lot, landscaping and sidewalk locations must be approved by Planning Commission staff. Section 10.102d.I.1.e highlights additional landscaping requirements.
- s. A waiver of the minimum parking requirement as set forth in Section 17.7 may be granted for all other circumstances by application to the Planning Commission if compliance with other provisions of this Ordinance is not feasible due to parking requirement. Applicant must specify reason for waiver request.
- t. Parking Structures
 - (i) Parking Structures shall appear as inconspicuous as possible and be visually screened from adjacent property and open space by the use of gradually sloping earth berms, new plantings, and/or the preservation of existing trees, where possible. Any parking structure that is located adjacent to a street shall have retail/commercial uses on the first level fronting the street and set back ten feet from the public Right-of-way. If this is not feasible, the parking structure shall be setback from the Right-of-way the required distance established by the Planning Director. The setback shall be planted with trees, shrubs, and ground cover to soften the view of the structure and establish an appropriate sense of scale. Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for additional requirements.

2. Alternative Porous Pavement Parking

- a. Alternative Porous Pavement Parking (Appendix K – Stormwater BMP Manual) must be utilized for parking spaces over the required number of parking spaces for that Development. Alternative Porous Pavement Parking must also be utilized for parking on lots that abut the Corporation Canal. The use of porous pavement is encouraged throughout the parking areas. (See Appendix K – Stormwater BMP Manual)

3. Schedule of Off-Street Parking Requirements

- a. One bicycle parking space for every twenty (20) motor vehicle parking spaces or a rack(s) that will hold ten (10) bicycles (permanently anchored) is encouraged. The bicycle rack(s) should be visually and physically accessible from the public sidewalk and street.

I. Landscape and Trees

1. Landscape Standards

a. Developed Site Area

- (i) The following Guidelines establish typical plant quantities. Because parcels will vary in size, physical character and restrictions, more or less plant material than specified below may be required as determined by the DPW Urban Forestry & Landscape Manager.

- (ii) Commercial, Office, and Retail Properties

- ! Shade Trees:

- a. One (1) Class “A” tree per forty (40) linear foot of frontage along public roadways and major private streets planted thirty-five (35) to forty-five (45) feet on-center.
- b. One (1) per ten (10) surface parking spaces with a minimum of two (2) Class “A” trees per landscape median within a parking lot. Landscape islands shall be a minimum of three hundred (300) square feet.
- c. Surface parking lots shall not have more than two bays of parking without a continuous planted median separating them. The median shall have a minimum width of ten (10) feet, unless otherwise determined by the DPW Urban Forestry & Landscape Manager.
- d. Where feasible, spacing of street trees shall be coordinated with the striped on-street parking spaces, when such striping exists. This spacing allows vehicle passengers to open doors without hitting a tree and thus minimizes the damage inflicted upon trees from car doors.

- ! Evergreen and Ornamental Trees:

- a. Two Class “B” trees may be substituted for each required Class “A” tree up to thirty (30) percent of the required number, if approved by the DPW Urban Forestry & Landscape Manager.

! Ground Plane Planting:

- a. A minimum of fifteen (15) percent of a developed site shall consist of planting beds with shrubs, flowers, or groundcover.

(iii) Plant Materials

- ! Refer to “Policy for Roadside Vegetation Management,” pages 37-41 located in the Planning Commission office.

b. Street Planting Area

- (i) Shrubs and ground cover plantings to the extent that forty (40) percent of the street planting area is planted with vegetation other than turf grass.
- (ii) Constructed elements such as courtyards, plazas, planters, benches, fountains and tables, in addition to the required landscaping may be included.
- (iii) A combination of both natural and constructed elements is encouraged.
- (iv) Corner lots with frontage on more than one street must provide a Street Yard Planting Area along the entire frontage of both streets.
- (v) Any Development with a Building Setback of twenty (20) feet or more shall include a ten (10) foot Street Planting Area within the Front Yard Setback. The minimum requirements for the Street Planting Area shall include one (1) Class “A” tree or two (2) Class “B” trees for every forty (40) linear feet of public street frontage, or fraction thereof, measured at the property line.

c. Buffer Yard Screening

- (i) Any commercial Development that abuts a residential land use must include a solid eight (8) foot fence, constructed with allowable materials, for screening. A fence permit that is in compliance with UDC Section 9.3 must be obtained from the Department of Public Works Inspection Division.
- (ii) Where gas fueling bays, parking lots, or any portion of a Vehicular Use Area front directly on Nicholson Drive, a landscape bed containing a continuous green hedge or masonry wall must be provided to screen the Vehicular Use Area from view. The masonry wall’s color and finish shall match the primary structure. The landscape bed must be a minimum of six (6) feet wide and the evergreen hedge or masonry wall cannot exceed thirty (30) inches in height.
- (iii) Unless otherwise provided, allowable materials for fences and walls include: natural and man-made stone, brick, aluminum, architectural concrete, or wood. Fencing made of barbed wire, razor wire, plastic, chain link, or vinyl clad chain link is prohibited.

d. Sight Triangle Area

- (i) On every corner lot within the triangle formed by the street lines of such lot and a line drawn between points on such lines as established below, there shall be no sign structure within the setbacks provided in subsections (a) and (b) hereafter.

- (ii) For a lot having an interior angle of ninety (90) degrees or more at the street corner thereof points shall be twenty (20) feet from the property lines extended.
- (iii) For a lot having an interior angle of less than ninety (90) degrees at the street corner thereof: Points shall be twenty (20) feet from the property lines extended, plus one foot for every ten (10) degrees or major fraction thereof by which such interior angle is less than ninety (90) degrees.

e. Vehicular Use Area

- (i) Any Development containing twenty-five (25) or more parking spaces shall contain a minimum of two (2) Class “A” trees or four (4) Class “B” trees for every fifteen (15) parking spaces, or fraction thereof.
- (ii) All parking areas shall be required to have a minimum of ten (10) percent of the total interior Vehicular Use Area landscaped with trees, shrubs and ground cover other than turf grass.
- (iii) Any Development containing twenty-five (25) or more parking spaces shall, where at all possible, include sunken parking islands with curb cuts or drains that would allow channelization of stormwater to vegetation planted within the island.
- (iv) Any Development requiring a Commercial Building Permit that abuts a lot with existing residential land use must contain a minimum twelve (12) foot wide Bufferyard and the minimum planting as required for a fifteen (15) foot Bufferyard Type A. Seventy-five (75) percent of the required trees in the Bufferyard must be evergreen.

(v) Service Areas

- ! Service areas are defined as designated areas for short-term trash storage and pick-up, short-term recyclable materials storage and pick-up as well as above or below ground utility equipment such as condenser units, chillers, transformers, utility meters, etc. Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for more information.

! Location

- a. Service areas within the District must be carefully sited to be easily accessible, while remaining hidden from direct view from the primary or side streets. This can generally be accomplished by adhering to the following guidelines;
 - i. Utility areas, mechanical equipment or designated loading spaces shall be located at the rear of buildings.
 - ii. Service areas should be designed to be part of the primary building and should not detract from the aesthetic appeal of the District.
 - iii. Service areas may not be accessed or serviced directly on a public street. They must be located internal to the parcel and adequately screened from view.

- iv. Service areas shall not be located at the entrance to a parking lot.
- v. Service areas shall be accessible by both vehicle access gates and a separate pedestrian access gate.

! Utilities

- a. Utility and service integration must be considered in the development of all blocks and parcels within subdivided blocks to allow the most effective connection to the infrastructure systems. These considerations shall include the installation of sleeves for future extension of piping, shared, and oversized utility connections between buildings and shared entry courts or service areas.

! Screening

- a. All dumpsters, exposed storage areas, machinery, service areas, truck loading areas, utility buildings, air conditioning units and other similar structures shall be screened from view from neighboring properties and streets with the same materials, color and/or style as the primary building in order to be architecturally compatible with the primary building.

! Service Bay Enclosures

- a. Fences, walls and gates may also be used in combination with walls and landscaping to provide screening of undesirable views or uses such loading docks, junkyards, building service areas, utility equipment, vehicle storage and outside storage. Where walls and fences are used for this purpose, their design shall be considered in context with the architecture of the buildings they serve and viewed as an extension of the architecture itself. Design, materials, color, location, and height of fencing must be approved by Planning Commission staff.

f. Maintenance

- (i) Landscaping must be maintained according to the plan that was approved as part of the Building Permit process.
- (ii) Individual owners shall be responsible for maintenance and upkeep.

2. Tree and Urban Forest Preservation Standards

- a. Trees that measure ten (10) inches or more in diameter at chest height may not be removed from a site without permission of the DPW Urban Forestry & Landscape Manager. The removal of such a tree may be denied if the tree is found to significantly contribute to the aesthetic character or ecology of a site or its surrounding area.

J. Design Standards

1. Building Materials

- a. Outlined below is a quick reference list providing an overview of the detailed guidelines requirements for the entire the District that are further described in Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center:
- (i) Building facades shall be varied and articulated for pedestrian visual interest.
 - (ii) Long, blank, unarticulated street wall facades shall not be allowed. Facades shall instead be divided into a series of structural bays (i.e., masonry piers that frame window and door elements).
 - (iii) Building materials shall be appropriate to scale and massing.
 - (iv) Building materials shall be predominantly brick, cast stone, cementitious siding, clay tile, natural or synthetic stucco, or other architecturally indigenous materials.
 - (v) Building skin shall avoid exterior reflective materials and mirrored glass.
 - (vi) Building massing and landscaping shall relate strongly to adjoining blocks/land bays.
 - (vii) Roofscapes shall be delineated by gables, cupolas, steeples, and towers.
 - (viii) Arcades, porches, balconies, bays, and awnings of proper scale are encouraged.
 - (ix) Opening in gables shall be centered.
 - (x) Roof articulation of mixed use, commercial and office structures: To avoid long expanses of unarticulated roofs, roofs shall be architecturally articulated at least every forty (40) linear feet. The articulation may consist of dormers, hip roofs, cupolas, gables, etc.
 - (xi) Roof articulation of multifamily residential structures: To avoid long expanses of unarticulated roofs, roofs shall be architectural articulated at least every twenty (20) linear feet. The articulation may consist of dormers, hip roofs, cupolas, gables, etc.
 - (xii) Environmental sustainability principles are encouraged in building design.
 - (xiii) Exposed ends of unit and foundation walls shall be clad in brick or cast stone.
 - (xiv) Dormers, chimneys and any other items extending above the roofline shall be of the same color and materials used in the building's façade.
 - (xv) Chimneys shall be clad in brick, cast stone, or architectural pre-cast concrete materials only.
 - (xvi) Roof penetrations, such as vents, skylights and stacks, shall be placed on rear roof slopes.
 - (xvii) The primary entrances to buildings shall have awnings, roof-type overhangs, or building overhangs. All highly reflective glazing and darkly tinted glass is prohibited.
 - (xviii) Flush mounted windows are not permitted.
 - (xix) Awnings, if used, should be of a durable, commercial grade fabric, canvas or similar material having a matte finish.
 - (xx) Bright and/or contrasting awning colors should be avoided. The awning colors should complement the building they are intended to serve and the proposed street furnishings
 - (xxi) Awnings should have a single color or two-color stripes. Utilizing more colors is permitted but will be considered as sign area and confusion.
 - (xxii) When there are several businesses in one building, awnings of a compatible color should be used with simple signs on the valance flap that may vary in type style and color to differentiate the individual businesses within the building.
 - (xxiii) Where the facade is divided into distinct structural bays (sections defined by vertical architectural elements, such as masonry piers), awnings should

be placed within the vertical elements rather than overlapping them. The awning design should respond to the scale, proportion and rhythm created by these structural bay elements and "nestle" into the space created by the structural bay.

- (xxiv) Awning frames and supports should be of painted or coated metal or other non-corroding material.
- (xxv) Glossy or shiny plastic or similar awning material is not recommended.
- (xxvi) Aluminum, metal, or canvas awnings are permitted in the District.
- (xxvii) Awning shape should relate to the window or door opening. Barrel-shaped awnings should be used to complement arched windows while square awnings should be used on rectangular windows.
- (xxviii) Awnings should be well-maintained, washed regularly and replaced when faded or torn.
- (xxix) Pre-fabricated metal outbuildings are not permitted. All ancillary structures must be approved by Planning Commission staff prior to construction.
- (xxx) Mechanical equipment and roof color shall be compatible and integrated with the building's design. Visible roof mounted equipment is prohibited. If necessary, the equipment shall be masked behind discreet screening materials. All roof-mounted mechanical equipment shall be screened and painted to blend the approved roofing color. Equipment shall be arranged in an orderly, clustered manner, grouped behind one parapet screen. At a minimum, a single continuous parapet wall without louvers or penetrations shall screen, or hide entirely, all roof mechanical equipment from ground views. Antennae, disks, solar panels, etc., if required by building occupants, shall be grouped in an orderly manner behind the mechanical screen referenced above unless specifically approved by Planning Commission staff. Refer to Old South Baton Rouge supplementary materials located in the Planning Commission Resource Center for more information.
- (xxxi) Where appropriate, the design of buildings shall provide a transition from the pedestrian level/storefront to the upper floors by the use of materials, building articulation, color and level of detailing. When seen from the streets, a transition zone shall add interest at the vehicular and pedestrian scale, thereby reinforcing the aesthetic experience and providing diversity and focal points.
- (xxxii) All structures shall be accessible in accord with the American's with Disabilities Act. No mechanical lifts or exterior ramp systems greater than fifteen (15) feet in length shall be allowed within any street.
- (xxxiii) Exterior fire escapes shall not be allowed within any zone. All means of emergency egress shall be contained within the structure.
- (xxxiv) The main entry to a building, leading to a lobby, stair or central corridor shall be emphasized at the street level to announce a point of arrival in one or more of the following ways:
 - ! Flanked columns, decorative fixtures or other details.
 - ! An entry recessed within the building's mass.
 - ! Covered by means of a portico (formal porch) projecting from or set into the building face (refer to zoning guidelines for allowable projections).
 - ! Punctuated by means of a change in roofline, a tower, or a break in the surface of the subject wall.

Section 10.102e Urban Design District Five – North Gate

A. Purpose

The purpose of the North Gate Urban Design Overlay District (District) is to provide regulations that strengthen the physical and economic character within the area shown on the Official Zoning District Map, generally described as the property located between the southern right-of-way of Roosevelt Street and the northern right-of-way of Chimes Street between Louisiana State University on the west and Corporation Canal on the east.

B. Applicability

The provisions of this section shall apply to all development meeting the criteria established in Section 10.102.A, Enforcement and Review, as well as any expansion, reconstruction, or exterior renovation which requires the issuance of a building permit and involves 40 percent or more of an existing building or structure. An exterior renovation, expansion or reconstruction shall be calculated based upon the gross square footage under the roof.

C. Building Placement

1. Primary Frontage

In order to maintain a uniform street frontage, buildings shall be located on the primary street frontage, as determined by the Planning Director, according to one of the standards identified below.

- a. A minimum of 50% of the primary street frontage shall have buildings set back from the right-of-way the average of the front setback of the abutting properties. If an abutting property is undeveloped, the new building may be set back up to 15 feet behind the property line or the average of the setback of all buildings on the same side of the street on the block in which the new building is proposed, whichever is less.
- b. Buildings may be located up to ten feet behind typical front building line if a courtyard with seating is provided. The courtyard area shall be enclosed by a fence, wall, or hedge no more than four feet tall to define the space and maintain the consistent street frontage.
- c. On a corner lot or a lot with frontages on multiple streets, the Planning Director shall determine the primary street frontage considering the following:
 - (1) The street classification of all streets;
 - (2) The prevailing orientation of other buildings in the area;
 - (3) The length of the block face on which the building is located; and,
 - (4) The location of any alley.

2. All Other Frontages

A minimum of 50% of the side and rear street frontages shall have buildings or walls or hedges, at least four feet in height, within 15 feet of the respective property line.

B. Building Design

1. Primary Frontage

To provide visual connection between activities inside and outside the building, 50% of the building façade between two and 10 feet in height, as measured from the adjacent

sidewalk, shall be made of windows or doors that are transparent, the bottom of which may not be more than four feet above the adjacent sidewalk. Windows shall not be mirrored or have glass tinted darker than 40% in order to meet this requirement.

2. All Other Building Frontages

All other street-facing facades, other than those facing an alley, shall comply with either of the standards listed below.

a. Thirty percent (30%) of the building façade between two and 10 feet in height shall be made of windows or doors that are transparent, the bottom of which may not be more than four feet above the adjacent sidewalk. Windows shall not be mirrored or have glass tinted darker than 40% in order to meet this requirement.

b. Have at least five of the following elements incorporated into the street-facing facade:

- (1) Masonry (except for flat, non-decorative concrete block);
- (2) Concrete or masonry plinth at the base of the wall;
- (3) Belt courses of a different texture and color;
- (4) Projecting cornice;
- (5) Decorative tile work;
- (6) Medallions;
- (7) Opaque or translucent glass;
- (8) Artwork or wall graphics;
- (9) Lighting fixtures;
- (10) Green walls; or,
- (11) Architectural elements not listed above, if approved.

3. Building Orientation

Buildings shall have their primary entrance facing the primary street. The primary entrance shall be readily apparent as a prominent architectural component and visible from the street.

4. Building Height

a. Generally

With the exception of buildings fronting on Chimes Street, no building within the overlay shall be taller than 60 feet.

b. Chimes Street

Buildings fronting on Chimes Street shall be no taller than 40 feet.

E. Site Design

1. Parking Areas

a. Surface Parking

All off-street surface parking shall be located to the side or rear of the primary building and shall be screened from the sidewalk by a wall or plantings between two and four feet in height. Parking areas shall comprise 40 percent or less of the street frontage for the lot or tract and, on corner lots, may not be located at the corner.

b. Structured Parking

- i. Parking structure facades. Parking structure facades along street frontages shall complement and be integrated into the design of the principal building.
- ii. Parking structure ground floor uses. Active uses shall be required on 30% of the ground floor frontage of parking structures facing the street.

2. Pedestrian ways

- a. Where a sidewalk(s), multi-use path(s), or public transportation stop exists on the perimeter of a lot, a designated pedestrian access way meeting the requirements of the Americans with Disabilities Act shall be clearly delineated connecting the sidewalk, path or transportation stop to the primary entrance of the building.
- b. Pedestrian amenities such as benches, trash receptacles, galleries, arcades, awnings, and outdoor seating may be allowed in the right-of-way subject to approval by the City/Parish.

3. Screening

- a. Loading docks shall be fully screened from the street or from adjacent residential property with screening that is a minimum of eight feet in height and complementary to the principal building architecture.
- b. Mechanical equipment and dumpsters shall be screened from view of all street frontages and adjacent properties with materials the same or a complimentary color and/or style as the building. If located on the roof, mechanical equipment shall be screened from view of these areas at ground level using the same color and/or a style compatible with the building façade.

3. Signs

a. Permanent signage

i. Types

Only the following types of signage shall be allowed:

- (a) Awning signs;
- (b) Canopy signs;
- (c) Marquee signs;
- (d) Monument signs;
- (e) Projecting signs;
- (f)** Roof signs, only on buildings greater than 50 feet in height;

(g) Suspended signs; and,

(h) Wall signs.

ii. Size

(a) Monument signs shall be limited to a maximum of eight feet in height.

(b) All other signs shall be no more than one square foot of building sign per linear foot of building along primary street frontage provided that their lowest point is no higher than 20 feet above the ground; however, a minimum of 32 square feet of sign area shall be allowed.

(c) Signs with their lowest point higher than 20 feet above grade may be as large as 10% of the total area of the building face on which they are located, provided that they do not block any windows or other openings of the building.

b. Temporary signage

A-frame sandwich board signs may be six square feet per sign face in area. A maximum of one such sign per entrance on the public street frontage in which the business advertised is located shall be allowed during business hours provided that they are brought inside at closing and are not placed to block Americans with Disabilities Act access.

4. Lighting

a. Height

Light fixtures shall no taller than the heights listed below:

i. 15 feet, for non-directional lighting; and,

ii. 30 feet, for directional (or full cut-off) lighting.

b. Shielding

Light shall be shielded from adjacent properties to ensure that no more than ½ foot candles, as measured on a lighting plan, extend across the property line of adjacent residentially zoned properties and no more than five foot candles, as measured on a lighting plan, extend across the property line of all other adjacent properties.

c. Pedestrian Lighting

Pedestrian lighting (free-standing or wall-mounted) shall be provided at one light for every 50 feet of street frontage or per an approved pedestrian lighting plan.

Section 10.102f – Urban Design Overlay District Six – Florida Boulevard

A. Purpose

To provide guidelines for development and redevelopment activity in the designated area, as shown in Appendix G, along Florida Boulevard from North Foster Drive to Flannery Road and to strengthen the physical and economic character of the neighborhood by mitigating or avoiding incompatible land uses in development and redevelopment.

B. Enforcement and Review

The Planning Commission staff shall certify compliance prior to the issuance of building permits for any new construction within the District. For existing structures, the Planning Commission staff shall certify compliance prior to issuance of Certificates of Occupancy.

1. New Construction

- a. New construction within the district boundaries shall comply with the Unified Development Code requirements imposed based on the zoning classification of the lot upon which the building or other improvement or sign is constructed or reconstructed and shall also comply with the additional requirements set forth herein.
- b. Section 10.102f.J shall only apply to new construction.

2. Existing Development

- a. Any new sign or business request after February 20, 2008 shall comply with the provisions of this section.
- b. Service bays/drives must comply with Section 18.3.B.6.i for current Landscape Standards relating to Utility Screening within three (3) years of February 20, 2008.
- c. Fencing made of barbed wire, razor wire, or chain link on any lot which fronts on Florida Boulevard and is visible from Florida Boulevard must be removed within sixty (60) days of adoption of this ordinance.
- d. Fencing made of barbed wire, razor wire, and chain link on any lot which fronts on Florida Boulevard and that is visible from the Public Right of Way other than Florida Boulevard must be removed within two (2) years of February 20, 2008.

3. Change of permitted use

- a. Non-conforming structures utilized by a single business which are not a part of a Development with multiple land uses, such as a shopping center, and which were in existence prior to the adoption of this section, shall conform to the requirements of the District prior to issuance of an occupancy permit for any change of use.

4. Additions

- a. Any addition and/or structural alteration of structures and/or parking lots resulting in a thirty (30) percent or more increase of gross square footage under roof shall conform to the requirements of the District.

5. Renovations

- a. Developments and other structures existing at the time of creation of the District shall conform with District requirements when one (1) or more renovations and/or structural alterations to any existing structure or

parking lot involves thirty (30) percent or more of the gross floor area under roof.

- b. Any modifications to a non-conforming sign, renovations to the building or property, change in use of the building or property, or damage to existing signs, the non-conforming sign must be brought into compliance with the Florida Boulevard Urban Design Overlay District regulations.

C. Waivers, Variations, and Exceptions

- 1. Parking waivers may only be granted by the Planning Commission in situations where the minimum parking requirement cannot be met due to size, shape, topographical constraints, or historical character of the neighborhood.

D. Dimensional Regulations

1. Permitted Height

- a. Height regulations shall be in accordance with the underlying zoning district with a maximum of forty-five (45) feet or in accordance with Growth Center allowances.

2. Minimum Lot Area and Widths

- a. Multi-tenant property and Out Parcels. Multi-tenant property shall include a unified site design enabling the planning of a project over the entire Development site and shall meet the District regulations in this article except as follows:

- (1) District standards and regulations shall be applied to the Multi-tenant property site perimeter boundary lines.
- (2) All lots within the Multi-tenant property site, except those Out Parcels with direct access to a public right-of-way, shall be bound together as a Multi-tenant property either by re-subdivision, cross dedication, servitude, or an instrument approved by the Parish Attorney as to form and legality and recorded in the Office of the Clerk of the Parish of East Baton Rouge.
- (3) All requirements of the District shall apply to each individual Out Parcel.

3. Building Siting and Orientation

- a. Manufactured homes/structures are prohibited.

E. Utilities

1. Lighting

- a. In parking lots of less than fifty (50) spaces, the maximum height for any pole mounted light fixture is twenty-five (25) feet.

F. Streets and Sidewalks

1. Sidewalks

- a. All new developments shall provide adequate and safe pedestrian circulation within parking areas. The pedestrian circulation must be a minimum of five (5) feet in width and separated from motor vehicles by using colored pavement, brick, alternative pavements and/or landscaping.
- b. All new developments shall provide a five (5) foot wide sidewalk with at least a five (5) foot green area setback from the road edge. Said sidewalks shall meet the Americans with Disabilities Act (ADA) requirements. Sidewalks must be located within the twenty (20) foot street yard planting area and connect with adjacent sidewalks, if adjacent sidewalks exist. If a sidewalk is unfeasible in the twenty (20) foot setback, then the same sidewalk may be located elsewhere along the property.

G. Signs

1. Abandoned

- a. All existing signs and supporting structures not in use as part of an active trade or business within thirty (30) days of February 20, 2008 must comply with the sign regulations put forth in Chapter 16 of the Unified Development Code.

2. Calculations

- a. One (1) additional attached sign shall be permitted on a secondary building frontage elevation area provided the total area of this sign does not exceed fifty percent of the allowable attached sign area as for single frontage properties.
- b. Each business on the premises shall be allowed one (1) canopy, awning or marquee sign in addition to other permitted attached signs with the area for the sign limited to thirty (30) percent of the total canopy, awning, or marquee area.
- c. Each Development shall be allowed one (1) on-premise detached sign except as noted below, subject to the following provisions:
- d. On corner lots where either property line exceeds three hundred (300) feet, a second detached sign shall be permitted with the same requirements for single frontage properties, provided that no such detached sign shall be located across from, adjacent to or within seventy-five (75) feet of a residential development or residential district.
- e. A second sign may be erected on the second frontage of a lot provided the following additional provisions are met:
 - (1) The maximum area of the second sign is fifty (50) square feet.
 - (2) The maximum area of the second sign is twenty (20) square feet if the lot is located across from, adjacent to or within seventy-five (75) feet of a residential development or residential district.
 - (3) The maximum height of the second sign is eight (8) feet.

- (4) The second sign must be incorporated into a landscaping bed of at least sixty (60) square feet. The landscaping bed shall consist of shrubs, ground cover (excluding grass) and/or other suitable plant materials, and exclude any impervious surface.
 - (5) The second sign must be set back from the property line a distance at least equal to the height of the sign.
 - f. No more than one (1) detached sign per frontage is allowed per Multi-tenant property. Any nonconforming signs shall conform to the requirements of the District within five (5) years of adoption of this section.
- 3. Maintenance
 - a. All existing signs shall be maintained in accordance with Section 16.8 of the Unified Development Code.
- 4. Prohibited Signs
 - a. Pole signs, temporary signs, and changeable letter signs are prohibited within the district.
- 5. Illumination
 - a. Each message displayed on any changing sign display shall remain static for at least eight (8) seconds following the completion of its transition from the previous message. As used in this subsection "static" shall mean a display that is fixed in one (1) position with no portion of the display being in motion or changing in color or light intensity.
 - b. When a message is changed mechanically, the transition between a complete static display of the previous message and a complete static display of the next message shall be accomplished in four (4) seconds or less. The transition period shall be measured as that period between any movement of any part of the display of the previous message and the time that the display of the next message is fully static.
 - c. When a message is changed electronically, the transition between a complete static display of the previous message and a complete static display of the next message shall be accomplished in two (2) seconds or less. The transition period shall be measured as that period between the time that the previous message is static and fully illuminated and the next message is static and fully illuminated.
 - d. No changing sign may include animated, flashing, full-motion video or other intermittent elements. The transition period between two fully illuminated static messages displays in an electronically changed sign shall not be considered an intermittent element so long as the purpose of the changing light intensity is to fade or dissolve into the next message.
- 6. Permanent On-Premise Signs By Type

d. Monument Signs

- (1) Only monument signs are allowed.
- (2) The height of a detached sign shall not exceed twenty-five (25) feet.

b. Changeable Letter Signs

- (1) Developments shall be allowed to include rate and price information on a detached sign subject to the following conditions:
 - (a) Freestanding signs displaying price and rate information are restricted to those uses which provide drive-through service as an integral element of its business activity.
 - (b) Only one (1) such sign shall be permitted and shall be limited to four (4) square feet in area; rise no more than six (6) feet in height; and may be illuminated but shall not flash, blink or fluctuate.
 - (c) All other price and rate information may be included on the detached sign structure and shall be limited to thirty (30) percent of the total permitted sign area.
 - (d) Menu boards servicing restaurants shall be permitted provided that said menu boards are not located within the first twenty (20) feet of the front of the development.

c. Wall Signs

- (1) No sign shall be erected above the roof ridge line of the main building. The maximum height for the sign shall not be over thirty-two (32) feet.

d. Projecting Signs

- (1) No projecting sign shall extend more than five (5) feet from the face of the building.

7. Off Premise Signs

- a. Off Premise signs are prohibited within the district. Off premise signs in existence at the time of adoption of this section are permitted and may be repaired, replaced, and re-located in accordance with the provisions of Chapter 16 of the Unified Development Code. However, any relocation may not increase the total number of off premise signs within the District.

H. Parking

1. Alternative Pervious Pavement Parking

- a. Pervious paving shall be required for all parking spaces which exceed the existing parking requirements by ten (10) percent.
- 2. Design Standards
 - a. Parking spaces shall be designated in such a manner that adequate maneuvering areas are provided and backing onto or off the street right-of-way will be prohibited.

I. Landscape and Trees

1. Landscape Standards

- a. Street Yard Planting Area
 - (1) The first twenty (20) feet from the property line shall be landscaped to include one (1) tree for each fifty (50) feet or fraction thereof. The street yard planting area must be a minimum of twenty (20) feet in width.
 - (2) The remainder of the required street yard planting area shall be planted with grass, ground cover or other landscape material and exclusive of paving. In addition, a hedge, wall, earth berm, or other durable landscape barrier of a minimum of three (3) feet in height can be placed in the street yard planting area. If said barrier consists of nonliving material, one (1) vine or shrub shall be planted every ten (10) feet and a minimum of three (3) feet in length at time of planting and abutting the barrier. Applies to new construction only.
 - (3) Five (5) bicycle parking spaces shall be required for every one-hundred (100) vehicular parking spaces.
- b. Buffer Yard Screening
 - (1) An eight (8) foot fence must be installed between existing residential use and any new non-residential use. The fence shall be maintained in a structurally sound manner, in good appearance, and replaced when necessary and kept free of refuse and debris.
 - (2) All outside stored inventory must be screened from view of public roads.
- c. Vehicular Use Area
 - (1) Applicable to areas used for parking of five (5) or more vehicles.
 - (2) A minimum of ten (10) percent of the vehicular use area of the interior of the lot shall be landscaped for the purpose of guiding and separating vehicular and pedestrian traffic.
 - (3) Landscaping shall be distributed in such a manner that no parking space is further than forty (40) feet from a Class "A" tree.

- d. Maintenance
 - (1) All landscaping must be maintained as specified in Chapter 18 Section 18.3.B of the Unified Development Code.
- e. Tree and Urban Forest Preservation Standards
 - (1) Live Oaks currently existing in the City-Parish or State Right-of-way shall be protected. In addition, no driveways or encroachment into the root zones of the trees will be allowed. No pruning or other work may be undertaken near these trees without prior approval of the Department of Public Works and/or Louisiana Department of Transportation and Development. Violations are punishable by fines up to dollar amount equal to the value of the loss or damage, as determined by a professional evaluation based upon the latest edition of Council of Tree and Landscape Appraisers Guide for Plant Appraisal.

J. Design Standards

- 1. Exterior Building Materials Permitted
 - a. Ceramic, tile, stucco (three-coat hard systems with hard or synthetic finish coat).
 - b. Architectural type metal wall and roof panels (standing-seam panels, flush panels, etc. with concealed fasteners).
 - c. Wood and/or composite type siding and trim (including but not limited too beveled lapped siding, fiber cement siding/trim and wood trim).
 - d. Wood, vinyl and metal soffit panels (including but not limited too finished wood trim, perforated fiber cement siding, panels, vinyl or metal interlocking panels, and aluminum vents).
 - e. Decorative type concrete masonry units (including but not limited too split-faced, ground face, ribbed, and brick).
 - f. Exposed high pitch roofing (architectural-type asphalt shingles, slate shingles, clay tile shingles, wood shingles, composite/cementitious simulated slate shingles, and metal shingles).
 - g. Non-exposed low pitch roofing systems (including but not limited too built-up roofing, modified bitumen, EPDM, and sprayed foam).
- 2. The following materials are not permitted:
 - a. Unpainted or painted standard gray concrete masonry units.
 - b. Aluminum siding (including but not limited too simulated-lapped board types).

- c. Non-architectural type pre-engineered metal building wall and roof components (including but not limited too trapezoidal panels with exposed fasteners).
- d. Exterior Insulation Finish System (including but not limited too EIFS one-coat soft systems).
- e. Non-architectural type asphalt shingles (including but not limited too three-tab asphalt shingles).

Section 10.102g Downtown Design Overlay

A. Purpose

This district is intended to create a well-defined destination attraction and vibrant commercial centerpiece within the historic core of Baton Rouge, with a balanced mix of arts and entertainment venues and activities. The district boundaries are shown on the official zoning map of the Parish and in Appendix G.

B. Applicability

All proposals for new construction, as well as any exterior renovation, expansion, or reconstruction increasing the gross square footage of a building by more than 40 percent or which involves any modification of the ground floor shall require that the Planning Commission staff review and certify compliance with this section prior to issuance of building permits.

C. Uses and Districts

Only uses and zoning districts shown in Table 10g.1, Uses Permitted in the Downtown Design Overlay, shall be allowed, as described below.

1. Permitted uses

A “P” in the table indicates that a use is allowed by right in the designated zoning district. Such uses are subject to all other applicable requirements of this ordinance.

2. Limited uses

An “L” in the table indicates that the use is a permitted use, but that there are restrictions on the use that must be satisfied as described in the Comments column.

3. Conditional uses

A “C” in the table indicates that a use is only allowed in the designated zoning district if approved through the granting of a conditional use permit by the Planning Commission. Such uses are subject to all other applicable requirements of this ordinance, as well as the limiting conditions established in Chapter 8.

4. Major conditional uses

An “M” in the tables indicates that a use is only allowed in the designated zoning district if approved through the granting of a conditional use permit by the Metropolitan Council. Such uses are subject to all other applicable requirements of this ordinance, as well as any limiting conditions associated with the zoning district.

5. Prohibited uses

A blank cell in the tables indicates that a use is not allowed in the designated zoning district.

D. Building Placement

1. Primary Frontage

A minimum of 75 percent of the primary street frontage for any development shall have buildings within ten feet of the front property line with the principal entrance oriented to that frontage. When site constraints preclude strict compliance with this requirement, the building line shall be measured one foot behind the line created by that constraint. On a corner lot or a lot with frontages on multiple streets, the Planning Director shall determine the primary street frontage considering the following:

- The street classification of all streets;
- The prevailing orientation of other buildings in the area;
- The length of the block face on which the building is located; and,
- The location of any alley.

2. All Other Frontages

A minimum of 50 percent of the side and rear street frontages shall have buildings or walls or hedges, at least three feet in height, within ten feet of the respective property line.

3. Alternative Placement

Buildings may be located up to 15 feet behind the front property line if a courtyard providing seating is provided. The courtyard area shall include the use of plant materials in at least five percent of its area to better define the space and soften its appearance from the street.

E. Building Design

1. Primary Frontage

- a. To provide visual connection between activities inside and outside the building, 50 percent of the building façade between two and ten feet in height, as measured from the adjacent sidewalk, shall be made of windows or doors that are transparent, the bottom of which may not be more than four feet above the adjacent sidewalk. Windows shall not be mirrored or have glass tinted darker than 40 percent in order to meet this requirement.
 - b. Signage posted in ground floor windows shall not obscure more than 30 percent of the window opening to ensure maintenance of the visual connection between the building and the street.
2. All Other Building Frontages
All other street-facing facades, other than those facing an alley, shall comply with either of the standards listed below:
 - a. Meet the primary frontage requirement above; or,
 - b. Have at least five of the following elements incorporated into the street-facing façade:
 - (1) Masonry (except for flat, non-decorative concrete block);
 - (2) Concrete or masonry plinth at the base of the wall;
 - (3) Belt courses of a different texture and color;
 - (4) Projecting cornice;
 - (5) Decorative tile work;
 - (6) Medallions;
 - (7) Opaque or translucent glass;
 - (8) Artwork or wall graphics;
 - (9) Lighting fixtures;
 - (10) Green walls; or,
 - (11) Architectural elements not listed above, if approved by Planning Commission staff.
3. Building Orientation
Buildings shall have their primary entrance facing the primary street as determined by the Planning Director. The primary entrance shall be readily apparent as a prominent architectural component and visible from the street.
4. Building Materials

Exposed ends of unit and foundation walls shall be clad with a material compatible with the primary material of the building.

F. Site Design

1. Parking Areas

a. Surface Parking

- (1) Unless established as a principal use, all off-street surface parking shall be located to the side or rear of the primary building. Surface parking areas shall comprise no more than 40 percent of the street frontage for the lot or tract and, on corner lots, may not be located at the street corner.
- (2) All off-street parking shall be screened from the sidewalk by a wall or plantings between three and four feet in height.

b. Structured Parking

- (1) Parking structure facades. Parking structure facades along street frontages shall complement and be integrated into the design of the principal building.
- (2) Parking structure ground floor uses. Active uses shall be required on at least 30 percent of the ground floor frontage of parking structures facing the street. Ground-story spaces should be flexible enough to accommodate a variety of uses.

2. Pedestrian ways

- a. Any deviation from the City standard for surfacing shall require the approval of the Director of Development and notification of the Downtown Development District.
- b. Pedestrian amenities such as benches, trash receptacles, galleries, arcades, awnings, and outdoor seating may be allowed in the right-of-way subject to approval by the City-Parish following notification of the Downtown Development District.

3. Screening

All utility areas (refuse, service areas, mechanical equipment, exposed storage areas, machinery, truck loading areas, utility buildings, and other similar structures) shall be incorporated as part of the building or shall be screened from view of neighboring properties and streets with complementary materials, color, and/or style as the primary building. If located on the roof, mechanical equipment shall be screened from public view at ground level using materials compatible with the building façade so as not to be visible from any public street.

4. Landscaping

- a. Planting of shrubs, ground cover, annuals, or other materials in tree wells shall be done only with the prior approval of the Director of the Department of Development.
- b. No tree or tree well within a public right-of-way shall be lighted, decorated, or adorned in any way without the prior approval of the Director of the Department of Development.

5. Signs

a. Permanent signage

(1) Types

Only the following types of signage shall be allowed:

- (a) Awning signs;
- (b) Marquee signs;
- (c) Projecting signs;
- (d) Roof signs, which shall be limited to the use of channel letters;
- (e) Suspended signs; and,
- (f) Wall signs, which shall be located within sign bands, if such features exist on the building.

(2) Size

- (a) Signs with their lowest point no higher than 20 feet above the ground shall be no more than one square foot of building sign per linear foot of building along primary street frontage.
- (b) Signs with their lowest point higher than 20 feet above grade may be as large as ten percent of the total area of the building face on which they are located, provided that they do not block any windows or other openings of the building.

b. Temporary signage

A-frame sandwich board signs may be six square feet per sign face in area. A maximum of one such sign per entrance on the public street frontage in which the business advertised is located shall be allowed during business hours provided that they are not placed to block Americans with Disabilities Act access.

5. Lighting

a. Placement

All lighting shall be building mounted at a maximum height of 14 feet with the exception of poles/structures in parking areas, plazas and public spaces. Pole-mounted lights shall be no taller than the heights listed below:

(1) 15 feet, for non-directional lighting

(2) 30 feet, for directional (or full cut-off) lighting

b. Shielding

Light shall be shielded from adjacent properties to ensure that no more than five foot candles, as measured on a lighting plan, extend across the property line.

c. Access Lighting

All pedestrian access points shall be provided with building-mounted lighting and shall be visible from off site.

d. Accent Lighting

Architectural details on buildings may be up lit in order to highlight these elements.

6. Fences and Walls

a. Materials

Fences and walls, other than those required for screening, shall be constructed of wood, decorative metal, or masonry (other than unfinished or painted concrete block). The structural support members of wooden perimeter fences shall be located on the interior of the fence and shall not be visible from adjacent properties.

b. Height

Fences located in front yards may not be higher than four feet in height unless they are constructed to permit 50 percent visibility into the yard or are required for screening.

Section 10.102h Jefferson Highway Overlay

A. Purpose

This district is intended to strengthen the physical and economic character of the lots along Jefferson Highway as designated on the Official Zoning District Map, but generally described as being between I-12 and Needles Drive on the south side of Jefferson Highway by ensuring buildings and uses are compatible those of the surrounding area.

B. Applicability

The provisions of this section shall apply to all development meeting the criteria established in Section 10.102.A, Enforcement and Review, as well any expansion, reconstruction, or exterior renovation which requires the issuance of a building permit and involves 40 percent or more of an existing building or structure. An exterior renovation, expansion or reconstruction shall be calculated based upon the gross square footage under the roof.

C. Change of Zoning Districts

Properties within the boundaries of this overlay district may only seek rezoning to the Neighborhood Office (NO) district. No properties within the boundaries shall be approved for rezoning to any other zoning district.

D. Uses

Only the uses shown in Table 10h.1, Uses Permitted in the Jefferson Highway Overlay, shall be allowed, as described below:

1. Permitted uses

A “P” in the table indicates that a use is allowed by right in the designated zoning district. Such uses are subject to all other applicable requirements of this ordinance.

2. Limited uses

An “L” in the table indicates that the use is a permitted use, but that there are restrictions on the use that must be satisfied as described in the Comments column.

3. Conditional uses

A “C” in the table indicates that a use is only allowed in the designated zoning district if approved through the granting of a conditional use permit by the Planning Commission. Such uses are subject to all other applicable requirements of this ordinance, as well as the limiting conditions established for the use.

4. Prohibited uses

A blank cell in the tables indicates that a use is not allowed in the designated zoning district.

E. Hours of Operation

No business shall be open to the public between the hours of 9:00 p.m. and 5 a.m.

**Table 10h.1
Uses Permitted in the Jefferson Highway Overlay**

Uses	Zoning Districts					Comments

Day Care Center, Child or Adult		C				
Film and Sound Production		P/C ¹		P	P	
Gymnasium/Health Club			L			No more than 50% of the floor area

¹ Conditional Use Permit required for building(s) greater than 2,500 square feet but less than 5,000 square feet per lot. No building(s) greater than 5,000 square feet per lot allowed.

F. Yards

1. Front yards – 20 feet
2. Side Yard – five feet
3. Corner Side Yard – 20 feet
4. Rear yard – 25 feet

G. Building Design

1. Building Height
No building greater than 35 feet in height shall be permitted.
2. Building Orientation
Buildings shall have their primary entrance facing the primary street as determined by the Planning Director.
3. Roof Design
Only pitched roofs may be permitted.

H. Site Design

1. No outside storage or work areas shall be allowed.
2. Driveways

No property may have more than one driveway with a maximum width of 24 feet on Jefferson Highway.

3. Parking Areas

No more than one bay of parking spaces shall be allowed in the front of a building facing Jefferson Highway. All other parking shall be located to the side or rear of the building.

4. Pedestrian Paths

Pedestrian paths meeting the requirements of the Americans with Disabilities Act shall be clearly delineated connecting all parking areas and sidewalks along streets to the primary entrance of the building.

5. Utilities

Only ground mounted mechanical equipment shall be allowed.

6. Signs

- a. Only the following types of signs, applying the standards provided in Chapter 16, Signs, unless modified below, shall be allowed:

(1) Monument signs

(a) Maximum number – one per site

(b) Maximum height – five feet

(c) Maximum area per face – 24 square feet per face in area

(2) Wall signs

One square foot per linear foot of frontage with a minimum of 32 square feet

- b. No signs or graphics may be painted directly onto the wall of a building.

- c. No signs may be internally illuminated.

7. Lighting

- a. Pole mounted light fixtures may only be permitted within parking areas subject to the following limitations.

(1) The maximum height for pole mounted fixtures shall be 18 feet.

(2) Pole mounted fixtures shall be designed as full cut-off fixtures and ensure that the maximum level of trespass at a property line does not exceed two foot candles.

- b. Wall mounted fixtures within 40 feet of the boundary of this overlay shall not be located above the ground floor of the building on which they are located.

8. Landscape Buffers

All development shall provide an L2 buffer 20 feet in width and a solid eight-foot tall fence or wall with a solid gate to permit access for maintenance wherever the property abuts property outside of the overlay boundaries.

9. Fences and Walls

Plastic and chain-link fencing shall be prohibited.

Section 10.102i Urban Design Overlay District Nine – Old Hammond Highway

A. Purpose

This District is intended to strengthen the physical and economic character of the neighborhood in the immediate vicinity of Old Hammond Highway from Airline Highway to South Sherwood Forest Boulevard by mitigating or avoiding functional and architectural incompatibility of buildings or uses through the provision of standards for development activity within the Overlay District (District) as shown on the official zoning map of the Parish and illustrated in Appendix G.

B. Applicability

The provisions of this section shall be applied to all development other than single family residential dwellings meeting the criteria established in Section 10.102, including any expansion, reconstruction, or exterior renovation.

C. Uses

- Only uses as shown in the table below shall be allowed:

	A1	A2.1	A2.5	B	B1	NO	GOL	NC	C1	CAB1	C2	CAB2
Residential Uses												
Single Family	P				P ¹	P		P	P	P	P	P

P – Permitted Use

C – Conditional Use

¹ On property zoned B1 prior to December 14, 1982, or that had existing structures built prior to December 14, 1982 on property zoned after December 14, 1982

² Cannot exceed 50% of the floor area of the site.

³ Limited to 2,500 square feet per site.

1. The Planning Commission Staff shall certify the appropriateness of the proposed use prior to issuance of building permits.

D. Building Placement

Buildings shall be located on the site to provide the following yards.

1. Front Yard (the yard facing Old Hammond Highway) -- 20 feet maximum
2. Interior Side Yard (not facing any street) – five feet
3. Rear Yard – 20 feet for all one story buildings 40 feet for all buildings greater than one story
4. Corner Side Yard – 20 feet maximum.

E. Lighting

1. Lighting mounted on buildings or fences shall be no more than eight (8) feet above the ground.
2. Pole lighting shall not exceed eighteen (18) feet in height.
3. All lighting shall be fully shielded and directed inward toward subject lot and away from residential properties.

F. Building Design

1. Height
Buildings may not be taller than twice the maximum height permitted on any adjacent property.

2. Fenestration

On property adjacent to residentially used property, windows shall not be permitted above the first story on the side of any building facing the residentially used property.

3. Materials

a. Building

Only brick, cast stone, cementitious siding, or natural or synthetic stucco shall be permitted.

b. Roofing

If visible from ground level view of adjacent properties or public rights-of-way, roofs shall be made of architectural asphalt shingles, standing seam copper, slate (or imitation slate) or clay tile.

c. Awnings

Awnings shall be made of bronze, black, or copper metal or anodized aluminum.

d. Chimney Caps

Chimney caps shall be made of bronze, black, or copper metal or anodized aluminum.

G. Site Design

1. Parking

All parking areas must be located to the side or rear of buildings, except that no parking areas may be located at a street corner. If located to the side of a building, parking areas shall comprise no more than 40 percent of the street frontage and shall be screened from the right-of-way by a wall or plantings at least four feet in height.

2. Screening

a. Enclosures for all utility areas (refuse, service areas, mechanical equipment, exposed storage areas, machinery, truck loading areas, utility buildings, and other similar structures) shall be located outside of all required yards and behind the building being served.

b. No roof-mounted utilities shall be permitted.

3. Signs

a. Types

Only the following types of signs shall be permitted:

- i. Monument signs, one per street frontage
- ii. Wall signs, one within five feet of each entrance to a building

b. Dimensions

- i. Monument signs shall not exceed 32 square feet in area per face and eight feet in height.
- ii. Wall signs located at the primary entrance shall not exceed 32 square feet in area.
- iii. Wall signs located at any entrance other than the primary one shall not exceed three square feet in area.

c. Miscellaneous Provisions

- i. Signs may not flash, blink or fluctuate and may not be animated. Fluctuation is defined as a variation in brightness and/or images that move quickly up and down or side to side.
- ii. Wall paintings and graphics, including, but not limited to, murals and air-brushed or paint sprayed signs, are not permitted.

d. Off Premise Signs

Off premise signs shall be prohibited.

e. Applicability

All signs shall be brought into compliance with these standards no later than July 1, 2015.

4. Fences and Walls

a. Front yards

i. Materials

Only brick, wood, wrought iron or other decorative metal may be used.

ii. Height

Fences may not be higher than four (4) feet in height unless they are constructed to permit 50% visibility into the yard or are required for screening, in which case they may be six (6) feet tall.

b. All other yards

Only fences or walls that are a minimum of six (6) feet in height and constructed of wood or masonry, provided however, that no walls of exposed, unfinished, or painted-only concrete block shall be erected.

c. Applicability

All fences and walls shall be brought into compliance with these standards no later than July 1, 2015.

Section 10.103 Redevelopment Overlay Districts

A. Enforcement and Review

1. New Construction

a. For new construction, Planning Commission staff shall certify compliance prior to issuance of building permits.

2. Existing Development

a. For existing structures, Planning Commission staff shall certify compliance prior to issuance of Certificates of Occupancy.

Section 10.103a Redevelopment Overlay District One – Old Town

A. Purpose

The Old Town Redevelopment Overlay District (Residential Uses Only) is intended to:

Recognize and validate the residential development styles that pre-date our Zoning Ordinances;

Preserve our housing inventory in Old Town;

Encourage rehabilitation and rebuild of residences on our existing lots;

Encourage use of existing infrastructure;

Preserve the character and sense of place of the Old Town neighborhoods;

Provide for a more simple and cheaper approval process for permitting.

This Ordinance encourages infill development through the redevelopment of residential properties within the confines of the overlay and to address problems related to redevelopment in older neighborhoods. Most of these neighborhoods were developed prior to or immediately following World War II, long before any zoning districts were created. Most, if not all of these lots do not meet Unified Development Code lot and yard requirements of the zoning district that they were adopted into, but were protected by the grandfather status as long as they were not further subdivided.

B. Applicability

1. The Old Town Redevelopment Overlay District shall be applicable to lots of record platted prior to 1941 located within the corporate city limit, as it existed prior to the adoption of the Plan of Government in August 1947 and the areas generally bordered by Dalrymple Drive, Chimes Street, and the Mississippi River as indicated on the attached map.
2. No subdivision of property shall be allowed on any lots within the overlay district unless the subdivision request meets the requirements of the underlying zoning district.

C. Lot and Yard Requirements

1. Minimum front yard setback – eight (8) feet
2. Minimum rear yard setback – ten (10) feet
3. Minimum side yard setback – ten (10) percent of the lot width
4. Minimum lot width –twenty (20) feet
5. Minimum lot area –one thousand (1000) square feet

D. Parking

1. One (1) space per unit.
2. Off-street parking spaces may not be located in the required front yard setback.
3. Parking waivers may be granted by the Planning Commission in situations where the minimum parking requirement cannot be met due to size, shape, topographical constraints, or historical character of the neighborhood.

E. Exceptions

1. Where on the effective date of this ordinance two (2) or more residential structures, having an average front yard setback greater than eight (8) feet, occupy fifty (50) percent or more of block face, the front yard setback shall be the average of the then existing front yards. However, in no instance shall the required front yard setback be greater than fifteen (15) feet.
2. If a residential structure is destroyed or demolished and it did not have off street parking, it may be rebuilt without having to meet the one (1) space per unit parking requirement.

3. Multiple detached residential structures, which existed on a single lot of record prior to 1941, may be replaced or reconstructed.

Section 10.104 Local Historic Overlay Districts

A. Enforcement and Review

1. New Construction
 - a. For new construction, Planning Commission staff shall certify compliance prior to issuance of building permits.
2. Existing Development
 - a. For existing structures, Planning Commission staff shall certify compliance prior to issuance of Certificates of Occupancy.

Section 10.104a Local Historic Overlay District One – Drehr Place

A. Purpose

To provide guidelines for development activity in the designated area as shown in Appendix G within the Drehr Place Local Historic District and to maintain, preserve, and enhance the architectural character of the district.

B. General Consideration

Provide and maintain proper site drainage so water does not damage building walls and foundations or cause mildew and rot.

C. Building Site

1. Alignment, Orientation, and Spacing
 - a. Locate the structures within the range of alignments seen traditionally in the area, maintaining traditional setbacks at the front, side, and rear of the property.
 - b. Building proportions should respect traditional patterns in the district.
 - c. The primary building entrance should be oriented toward to the street.
 - d. Preserve the original location of the main entry and walk.
 - e. In neighborhoods with alleys, garages should be located at the rear of the lot and accessed from the alley.
2. Fences, Walls and Gates
 - a. Retain and preserve historic fences, gates and walls whenever possible. Repair deteriorated components rather than replace them.
 - b. Do not introduce new fences, gates, or walls in the front yard where these elements are not traditionally found. Chain-link, board fences,

wire fences, and vinyl fences are inappropriate for front yards, but may be used in rear yards.

- c. New fencing should reflect the character of the historic fences in height, openness, materials, and finish.
- d. Fences in the front yard should be no more than four (4) feet in heights. Fences may be higher and less open in the rear yard.
- e. Front yard fences should have some degree of openness and spacing of slats so that the main structure is visible from the street. A view of the building's main architectural features should not be obstructed.
- f. In many instances, planted hedges may be more appropriate than new fences or walls, especially in side yards.

3. Walks and Pavement

- a. Retain and preserve original sidewalk materials where they exist. The majority of sidewalks are concrete. Whenever reasonable, this continuum should be respected. The protection of a major tree is a possible reason for selecting a substitute material.
- b. The consistent width of sidewalks in the district shall be adhered to.
- c. New walkways should be compatible in location, pattern, spacing, dimensions, materials, and color. New walkways should be straight and perpendicular from the sidewalk to the main entrance.
- d. Historically appropriate paving materials should be used for parking areas and driveways.
- e. Parking and parking pads in the front yard are inappropriate.

4. Landscaping

- a. The HPC must issue a COA for the removal of trees that measure 18 inches or greater diameter at breast height.
- b. Preserve the existing private tree stock as long as the trees are not damaging a historic structure or are not becoming a public nuisance.

5. Lighting

- a. Retain and preserve exterior lighting fixtures that contribute to the overall historic character of a building, site or district.
- b. Lighting fixtures should not detract from the overall historic character of the building site, or streetscape.

D. Building Structural Systems

1. Foundations

- a. For alterations and additions, foundations and structural elements

should be consistent with the existing and should meet or exceed requirements of the current building code. For pier and beam foundations, the design should provide for ventilation of crawl spaces. For slab-on-grade foundations, care should be taken to avoid damaging root systems of established trees.

E. Building Exterior Features

1. Materials

- a. Original materials should be restored and reused whenever possible. Where necessary, missing or deteriorated materials should be replaced with recycled or new materials which match the original as closely as possible with regard to: type of material, size of unit, color, shape, composition, texture, style, type of joint, placement, and detailing.
- b. Cleaning of existing materials should be done by the least damaging method possible. Sandblasting is not an acceptable method for cleaning.
- c. Architectural features such as cornices, brackets, window sills and architraves, and doorway pediments shall not be removed or obscured when resurfacing materials is applied.
- d. Siding should be applied horizontally, and all wood siding should be painted.

2. Roofs and Roofing

- a. The original roof form and architectural features of a historic structure should be retained and preserved, including the slope, heights, orientation to the street, dormer windows, cornices, brackets, and chimneys.
- b. Preserve the character of the original roofing and its detail. Skylights installed on a historic roof should be as unobtrusive as possible and not visible from the public right-of-way. Flat skylights that blend with the roof are most appropriate.
- c. Rooftop utilities should not be visible from the public right-of-way or should be inconspicuously placed and screened. Utilities should be placed so as not to damage or obscure historic elements.

3. Chimneys

- a. Visually prominent chimneys should be retained and preserved. Original chimneys should not be removed from the structures.
- b. New chimneys should be constructed of compatible materials.

4. Doors

- a. Retain and preserve all original doors. When replacement is necessary, the new door shall match the original as closely as possible in size, configuration, style and material.

- b. Raw metal storm doors are not appropriate. Removable storm doors should be utilized wherever possible. Aluminum storm doors should be painted to match the trim.
- c. Retain and preserve the functional, proportional, and decorative features of a primary entrance, including the door, its frame, sill, head, jamb, moldings, and any flanking windows.
- d. Historic hardware, hinges, lockets, and knobs that are significant should be preserved.
- e. Door trim should be similar in scale, proportion, finish, and character to those used traditionally on the structure.

5. Windows

- a. Retain and preserve existing historic windows, including their functional and decorative features, such as frames, sashes, muntins, sills, heads, moldings, surrounds and hardware.
- b. Preserve original window locations. Original openings shall not be altered or filled in on the front of homes.
- c. Repair rather than replace the functional and decorative features of original window.
- d. If repair is not feasible, the window should be replaced to match the original window in size, configuration, style and material. Metal clad or vinyl clad window frames are generally unacceptable unless painted so as to resemble the original closely. Raw metal storm windows that obscure the original windows are unacceptable.

6. Shutters

- a. Original shutters shall be repaired, rather than replaced, whenever possible. When replacement is necessary, the new shutters shall match the original shutters as closely as possible in size, configuration, style and material. Vinyl shutters are generally unacceptable, unless painted to resemble the original closely.
- b. Shutters should only be used if they are appropriate for the style of the house.
- c. Shutters do not need to be operable, but must be sized to maintain the appearance of operability.
- d. Shutters should be used in the place of exterior security devices such as bars or grilles.

7. Awnings

- a. Original awnings should be preserved and repaired.
- b. Original awnings that are missing or too deteriorated to repair should be replaced to match the original awning as closely as possible in size,

configuration, style, and material.

- c. Awnings which were a latter addition to the home, and which conceal other, finer, architectural elements with the home, may be removed.
- d. New awnings should be installed without damaging window trim or other architectural fabric.
- e. Copper awnings are generally acceptable if it can be shown that they are architecturally appropriate for the age and style of the home.

8. Porches and Steps

- a. Original porches and steps should be preserved.
- b. Deteriorated original porches and porch elements should be repaired or replaced so that the character of the porch is not compromised. When replacement is necessary, the new porch shall match the original as closely as possible in size, configuration, style and material.
- c. Front porches should not be enclosed.
- d. Side porches visible from the street may be glassed in, if the basic look and structure of the porch is maintained.
- e. When replacement of steps is necessary, the new steps shall match the original as closely as possible in size, configuration, style and material. Replacement materials shall not depart from the original appearance of the steps; i.e., brick or concrete masonry steps may not be replaced with wood. In some instances, wood steps may be replaced with brick or masonry, if the proposed change is in keeping with the overall style of the house.
- f. Pre-cast concrete steps are unacceptable and shall not be installed in the front of any house.

9. Loggias, Porticos, and Arches

- a. Original loggias, porticos, and arches should be preserved and maintained.
- b. If replacement is necessary, the new structure shall match the original as closely as possible in size, configuration, style and material.

10. Balconies and Decks

- a. Balconies and decks should be located on the rear, not on the front, of the building. Front balconies or decks are appropriate only if recreating a historic element.
- b. Balconies should be integrated into the structure either by setting it into the building or by incorporating it into the roof structure.
- c. Balusters should be vertically placed not more than six (6) inches apart. Solid plank railing shall not be permitted. Railing heights should not

exceed forty-two (42) inches. Screened or glass enclosed decks should be avoided if visible from the right-of-way.

F. Exterior Ornamentation

Significant exterior architectural details should be preserved and maintained on historic properties to sustain the district's significance.

G. Energy and Utility Considerations

1. New mechanical systems should be installed so that it causes the least amount of alteration to the building's exterior facade, materials and site features.
2. Mechanical equipment should be installed in the most inconspicuous area avoiding installation on the street facade whenever possible or should be screened from view.
3. Mechanical equipment should not be in locations that compromise character-defining roofs that are prominently visible from the street.
4. Mechanical equipment attached to the side or roof of a building should be kept as low as possible and covered or painted to blend with the background.
5. Wall or window air conditioning units on the street facade should be avoided whenever possible.

H. Secondary Buildings

1. Retain and preserve garages and accessory buildings that contribute to the overall historic character of the individual building site or the district.
2. Retain and preserve character-defining materials, features, and architectural details of historic garages and accessory buildings, including roofs, exterior materials, windows, and doors.

I. Connections Between Buildings

1. Connections between buildings should be as inconspicuous as possible and such connections should be achieved by small hyphens or connectors.
2. The connected buildings should continue to read as distinct and separate entities.

J. New Construction

1. Primary Buildings - New Construction

- a. New buildings should be compatible with surrounding buildings that contribute to the overall character of the historic district in terms of setback, orientation, spacing, distance from adjacent buildings, and the proportion of built mass to open space on the individual site.
- b. New buildings should be compatible with surrounding buildings that contribute to the overall character of the historic district in terms of height, size, scale, massing, and proportions.

- c. Materials should be similar in scale, proportion, texture, finish and color to those found on nearby historic structures.
 - d. A human scale should be maintained by avoiding large, featureless surfaces by using traditional sized building components and materials.
 - e. Spacing, placement, scale, orientation, proportion, size, and material of windows and doors in new buildings should be compatible with the surrounding buildings that contribute to the historic district.
 - f. New structures should utilize a roof form found in the historic district.
 - g. Porches should be compatible in massing and details to historic porches in the district, and should be appropriate to the style of the house.
 - h. Dormers should be secondary to the main roof. Oversized dormers are in appropriate.
2. Primary Buildings - Additions
- a. New additions should be constructed so that there is the least possible loss of historic fabric and so that character-defining features are not destroyed, damaged, or obscured.
 - b. An addition should be distinguished from the historic structure, but should also maintain visual continuity.
 - c. An addition should be subordinate to the historic building, limited in size and scale so that it does not diminish or visually overpower the historic structure.
 - d. An addition should be compatible in mass, scale, materials, and color. Columns, piers, and exposed structural elements should be compatible with the original design in style, proportion, and materials.
 - e. The overall character of the site, site topography, character-defining site features and trees should be preserved.
 - f. New additions should be on an inconspicuous elevation on the historic building, generally in the rear of the historic building. Additions should not obscure the historic facade of a building.
 - g. Respect the established orientation of the original building and typical alignments in the area.
 - h. Rooflines of additions should be lower and secondary to the roofline of the original building.
 - i. Existing roof form, pitch, eave depth, and materials should be used on all additions.
 - j. Maintain the proposition, general style, and symmetry or asymmetry of the existing window patterns.

- k. Materials and construction of windows should be similar to historic windows.
 - l. Slab-on-grade additions are prohibited, unless the existing structure is also slab-on-grade.
 - m. If the existing house has exposed rafter ends, any addition should also have exposed rafter ends.
- 3. Site Plans
 - a. New buildings should conform to the guidelines for site design under “Residential Buildings-Building Site”.
- 4. Secondary Buildings
 - a. New secondary buildings should be located at the rear of the lot, respecting the traditional relationship of such buildings to the primary structure and the site.
 - b. New secondary buildings should take design cues from the primary structure on the site, but should be subordinate to it in terms of massing and size.
 - c. Roof form and pitch should be complimentary to the primary structure.
 - d. Materials for new secondary buildings should be compatible with those found on the primary structure and in the district.
 - e. Two story secondary buildings are not permitted if the primary building is only one story. This includes, but is not limited to garages, carports, workshops, storage sheds, boat houses, and playhouses.

Section 10.104b Local Historic Overlay District Two – Spanish Town

A. Purpose

To provide guidelines for development activity in the designated area as shown in Appendix G within the Spanish Town Local Historic District and to maintain, preserve, and enhance the architectural character of the district.

- B. General Consideration provide and maintain proper site drainage so water does not damage building walls and foundations or cause mildew and rot. Roof and site drainage must be directed away from adjacent properties.

- C. Notwithstanding the use restrictions required by the underlying zoning district, the following uses shall be permissible on all properties within the Spanish Town Local Historic District:

- 1. Single family dwellings
- 2. Two-family dwellings

D. Building Site

1. Alignment, Orientation, and Spacing
 - a. Notwithstanding the requirements of the underlying zoning district, required front and side yard setbacks of any structure shall be the average front and side yard setbacks, plus or minus two feet, of all structures of a similar use on the same block face.
 - b. Building proportions should respect traditional patterns in the district.
 - c. Preserve the original location of the main entry and walk.
2. Fences, Walls and Gates
 - a. Retain and preserve historic fences, gates and walls whenever possible. Repair deteriorated components rather than replace them.
 - b. Do not introduce new fences, gates, or walls in the front yard where these elements are not traditionally found. Chain-link, board fences, wire fences, and vinyl fences are inappropriate for front yards, but may be used in rear yards.
 - c. New fencing should reflect the character of the historic fences in height, openness, materials, and finish.
 - d. Fences in the front yard should be no more than four (4) feet in heights. Fences may be higher and less open in the rear yard.
 - e. Front yard fences should have some degree of openness and spacing of slats so that the main structure is visible from the street. A view of the building's main architectural features should not be obstructed.
 - f. In many instances, planted hedges may be more appropriate than new fences or walls, especially in side yards.
3. Walks and Pavement
 - a. Retain and preserve original sidewalk materials where they exist. The majority of sidewalks in Spanish Town were concrete. Whenever reasonable, this continuum should be respected. The protection of a major tree is a possible reason for selecting a substitute material.
 - b. The consistent width of sidewalks in the district shall be adhered to.
 - c. New walkways should be compatible in location, pattern, spacing, dimensions, materials, and color. New walkways should be straight and perpendicular from the sidewalk to the main entrance.
 - d. Historically appropriate paving materials should be used for parking areas and driveways.
4. Landscaping
 - a. The HPC must issue a COA for the removal of trees that measure eighteen (18) inches or greater diameter at breast height.

- b. Preserve the existing private tree stock as long as the trees are not damaging a historic structure or are not becoming a public nuisance or safety hazard.
 - 5. Lighting
 - a. Retain and preserve exterior lighting fixtures that contribute to the overall historic character of a building, site or district.
- D. Building Structural Systems
 - 1. Foundations
 - a. For alterations and additions, foundations and structural elements should be consistent with the existing and should meet or exceed requirements of the current building code. For pier and beam foundations, the design should provide for ventilation of crawl spaces. For slab-on-grade foundations, care should be taken to avoid damaging root systems of established trees.
- E. Building Exterior Features
 - 1. Materials
 - a. Original materials should be restored and reused whenever possible. Where necessary, missing or deteriorated materials should be replaced with recycled or new materials which match the original as closely as possible with regard to: type of material, size of unit, color, shape, composition, texture, style, type of joint, placement, and detailing.
 - b. Cleaning of existing materials should be done by the least damaging method possible. Sandblasting is not an acceptable method for cleaning.
 - c. Architectural features such as cornices, brackets, window sills and architraves, and doorway pediments shall not be removed or obscured when resurfacing materials is applied.
 - d. Siding should be applied horizontally, and all wood siding should be painted or stained.
 - 2. Roofs and Roofing
 - a. The original roof form and architectural features of a historic structure should be retained and preserved, including the slope, heights, orientation to the street, dormer windows, cornices, brackets, and chimneys.
 - b. Preserve the character of the original roofing and its detail. Skylights installed on a historic roof should be as unobtrusive as possible and not visible from the public right-of-way. Flat skylights that blend with the roof are most appropriate.
 - c. Rooftop utilities should not be visible from the public right-of-way or should be inconspicuously placed and screened. Utilities should be placed so as not to damage or obscure historic elements.
 - 3. Chimneys

- a. Visually prominent chimneys should be retained and preserved. Original chimneys should not be removed from the structures.
- b. New chimneys that are visible from the public right-of-way should be constructed of compatible materials.

4. Doors

- a. Retain and preserve all original doors. When replacement is necessary, the new door shall match the original as closely as possible in size, configuration, style, and material.
- b. Raw metal storm doors are not appropriate. Removable storm doors should be utilized wherever possible. Aluminum storm doors should be painted to match the trim.
- c. Retain and preserve the functional, proportional, and decorative features of a primary entrance, including the door, its frame, sill, head, jamb, moldings, and any flanking windows.
- d. Historic hardware, hinges, lockets, and knobs that are significant should be preserved.
- e. Door trim should be similar in scale, proportion, finish, and character to those used traditionally on the structure.
- f. Original door openings should not be reduced or enlarged in size.

5. Windows

- a. Retain and preserve existing historic windows, including their functional and decorative features, such as frames, sashes, muntins, sills, heads, moldings, surrounds and hardware.
- b. Original openings shall not be altered or filled in on the front of homes.
- c. Repair rather than replace the functional and decorative features of original window.
- d. If repair is not feasible, the window should be replaced to match the original window in size, configuration, style and material. Metal clad or vinyl clad window frames are generally unacceptable unless painted so as to resemble the original closely. Raw metal storm windows that obscure the original windows are unacceptable on facades visible from the public right-of-way.

6. Shutters

- a. Original shutters shall be repaired, rather than replaced, whenever possible. When replacement is necessary, the new shutters shall match the original shutters as closely as possible in size, configuration, style and material. Vinyl shutters are generally unacceptable, unless painted to resemble the original closely.

- b. Shutters should only be used if they are appropriate for the style of the house.
 - c. Shutters do not need to be operable, but must be sized to maintain the appearance of operability.
7. Awnings
- a. Original awnings should be preserved and repaired.
 - b. Original awnings that are missing or too deteriorated to repair should be replaced to match the original awning as closely as possible in size, configuration, style, and material.
 - c. Awnings which were a latter addition to the home, and which conceal other, finer, architectural elements with the home may be removed.
 - d. New awnings should be installed without damaging window trim or other architectural fabric.
 - e. Copper awnings are generally acceptable if it can be shown that they are architecturally appropriate for the age and style of the home.
8. Porches and Steps
- a. Original porches and steps should be preserved.
 - b. Deteriorated original porches and porch elements (including columns, piers, and posts) should be repaired or replaced so that the character of the porch is not compromised. When replacement is necessary, the new porch shall match the original as closely as possible in size, configuration, style, and material.
 - c. Front porches should not be permanently enclosed, however screening is an acceptable and historically appropriate treatment.
 - d. Side porches visible from the street may be glassed in, if the basic look and structure of the porch is maintained.
 - e. When replacement of steps is necessary, the new steps shall match the original as closely as possible in size, configuration, style and material. Replacement materials shall not depart from the original appearance of the steps; i.e., brick or concrete masonry steps may not be replaced with wood. In some instances, wood steps may be replaced with brick, cast-in-place concrete, or masonry, if the proposed change is in keeping with the overall style of the house.
 - f. Pre-cast concrete steps are unacceptable and shall not be installed in the front of any house.
9. Loggias, Porticos, and Arches
- a. Original loggias, porticos, and arches should be preserved and maintained. If replacement is necessary, the new structure shall match

the original as closely as possible in size, configuration, style and material.

10. Balconies and Decks

- a. Balconies and decks should be located on the rear, not on the front, of the building. Front balconies or decks are appropriate only if recreating a historic element.
- b. Balconies should be integrated into the structure either by setting it into the building or by incorporating it into the roof structure.
- c. Balusters should be vertically placed not more than six (6) inches apart. Solid plank railing shall not be permitted. Railing heights should not exceed forty-two (42) inches. Screened or glass enclosed decks should be avoided if visible from the right-of-way.

F. Exterior Ornamentation

Significant exterior architectural details should be preserved and maintained on historic properties to sustain the district's significance.

G. Energy and Utility Considerations

1. New mechanical systems should be installed so that it causes the least amount of alteration to the building's exterior facade, materials and site features.
2. Mechanical equipment should be installed in the most inconspicuous area avoiding installation on the street facade whenever possible or should be screened from view.
3. Mechanical equipment should not be in locations that compromise character-defining roofs that are prominently visible from the street.
4. Mechanical equipment attached to the side or roof of a building should be kept as low as possible and covered or painted to blend with the background.
5. Wall or window air conditioning units on the street facade should be avoided.

H. Secondary Buildings

1. Retain and preserve garages and accessory buildings built prior to 1948 that contribute to the overall historic character of the individual building site or the district.
2. Retain and preserve character-defining materials, features, and architectural details of historic garages and accessory buildings, including roofs, exterior materials, windows, and doors.

I. Connections Between Buildings

1. Connections between buildings should be as inconspicuous as possible and such connections should be achieved by small hyphens or connectors.

2. The connected buildings should continue to read as distinct and separate entities.

J. New Construction

1. Primary Buildings - New Construction

- a. New buildings should be compatible with surrounding buildings that contribute to the overall character of the historic district in terms of setback, orientation, spacing, distance from adjacent buildings, and the proportion of built mass to open space on the individual site.
- b. New buildings should be compatible with surrounding buildings that contribute to the overall character of the historic district in terms of height, size, scale, massing, and proportions.
- c. Materials should be similar in scale, proportion, texture, finish and color to those found on nearby historic structures.
- d. A human scale should be maintained by avoiding large, featureless surfaces by using traditional sized building components and materials.
- e. Spacing, placement, scale, orientation, proportion, size, and material of windows and doors in new buildings should be compatible with the surrounding buildings that contribute to the historic district.
- f. New structures should utilize a roof form found in the historic district.
- g. Porches should be compatible in massing and details to historic porches in the district, and should be appropriate to the style of the house.
- h. Dormers should be secondary to the main roof. Oversized dormers are inappropriate.

2. Primary Buildings - Additions

- a. New additions should be constructed so that there is the least possible loss of historic fabric and so that character-defining features are not destroyed, damaged, or obscured.
- b. An addition should be distinguished from the historic structure, but should also maintain visual continuity.
- c. An addition should be subordinate to the historic building, limited in size and scale so that it does not diminish or visually overpower the historic structure.
- d. An addition should be compatible in mass, scale, materials, and color. Columns, piers, and exposed structural elements should be compatible with the original design in style, proportion, and materials.
- e. The overall character of the site, site topography, character-defining site features and trees should be preserved.

- f. New additions should be on an inconspicuous elevation on the historic building, generally in the rear of the historic building. Additions should not obscure the historic facade of a building.
- g. Respect the established orientation of the original building and typical alignments in the area.
- h. Rooflines of additions should be lower and secondary to the roofline of the original building.
- i. Existing roof form, pitch, eave depth, and materials should be used on all additions.
- j. Maintain the proportion, general style, and symmetry or asymmetry of the existing window patterns.
- k. Materials and construction of windows should be similar to historic windows.
- l. Slab-on-grade additions are prohibited, unless the existing structure is also slab-on-grade.
- m. If the existing house has exposed rafter ends, any addition should also have exposed rafter ends.

3. Site Plans

New buildings should conform to the guidelines for site design under “Residential Buildings-Building Site”.

4. Secondary Buildings

- a. New secondary buildings should be located at the rear of the lot, respecting the traditional relationship of such buildings to the primary structure and the site.
- b. New secondary buildings should take design cues from the primary structure on the site, but should be subordinate to it in terms of massing and size.
- c. Roof form and pitch should be complimentary to the primary structure.
- d. Materials for new secondary buildings should be compatible with those found on the primary structure and in the district.
- e. Two story secondary buildings are not permitted if the primary building is only one story. This includes, but is not limited to garages, carports, workshops, storage sheds, boat houses, and playhouses.

Section 10.105 Design Standards

A. Purpose and Intent

To provide a range of development standards that promote and encourage consistency in the quality of design throughout the Parish, the comprehensive plan includes a map that divides the City and Parish into five design areas: Downtown, Urban, Walkable, Suburban and Rural, with different design standards assigned to each area. Each of these areas is further described as follows:

1. Downtown

The Downtown area represents the historic core of the City of Baton Rouge that is developed with the highest intensity uses in the parish as well as the older neighborhoods immediately adjacent to it. It includes pedestrian-oriented and bikeable areas within downtown or other pedestrian-oriented areas with similar densities as downtown.

2. Urban Areas

Urban areas represent the small lot residential neighborhoods that largely developed within the city limits of Baton Rouge prior to 1949 and the commercial areas that serve these neighborhoods. They include pedestrian-oriented and bikeable areas with transit service that have lower planned density than downtown Baton Rouge.

3. Walkable Areas

Walkable areas are those areas designated as Regional Centers and Town Centers in the comprehensive plan, as well as areas along major arterials. While currently largely auto oriented, they have a high potential for walkability and bicycling and transit service.

4. Suburban Areas

Suburban areas include much of the large-lot residential development of the parish, which are predominantly auto-oriented with limited opportunities for pedestrian activity. Suburban areas have the potential for enhanced pedestrian commercial areas, and sidewalks that connect to schools, public facilities and those commercial areas.

5. Rural Areas

Rural areas are located in outlying parts of the parish that are not likely to be developed or redeveloped in the near-term. These areas typically have streets that are not curbed or guttered and large acreage lots that may be used for agricultural purposes.

B. Effective Date

These provisions shall be effective as of the date the official zoning map is amended to reflect the placement of any design level or any portion of a design level on the map within the area so designated.

C. Applicability

The design standards of this Chapter, as detailed in the Applicability Table (Table 1) shall apply to all those developments, including planned developments, meeting any of the following categories, except that agricultural uses and industrial areas (as designated by the Plan of Government) shall be exempt:

1. Residential

- A. Building a structure that contains five or more dwelling units.
- B. Developing a parking lot that contains 6 or more spaces.

2. Non-residential

- A. Building a structure of greater than one thousand gross square feet.
- B. Converting a residential structure to non-residential use.
- C. Developing a parking lot that contains 6 or more spaces.

3. Expansions / Renovations

The expansion/renovation of existing buildings or site development shall be based on the following Expansion Applicability Table.

TABLE 1: EXPANSION OF MULTI-FAMILY AND NONRESIDENTIAL USES							
APPLICABILITY TABLE							
Use	Site Plan Required	Building Design Standards	Fencing and Screening	Parking and Transportation	Pedestrian and Bicycle Amenities	Signs and Lighting	Landscape
Multi-family expansion of 10% of the number of units or 10 units, whichever is less.	Yes	Yes, applied to new units with exterior walls	Yes	Yes, applied to the additional parking required for the new units	Yes	Yes	Yes
Cumulative non-residential expansion of a building by more than 2,500 square feet or 40% of the original building's square footage.	Yes	Yes, applied to new floor area with exterior walls	Yes	Yes, applied to the additional parking required for the new floor area	Yes	Yes	Yes, applied to the expanded impervious area attributable to the new floor area
Reconstruction after any voluntary demolition of all or more than 50 percent of all improvements on a site.	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Parking lot expansion (excluding re-striping) of six spaces or more.	Yes	N/A	Yes applied to the additional parking spaces	Yes applied to the additional parking spaces	NA	Yes applied to the additional parking spaces	Yes applied to the additional parking spaces

D. Approval Authority and Requirements

1. Approval Authority

- All projects that are smaller than 50,000 square feet in gross square footage, or less than 100 residential units may be approved by the Planning Director, unless the project proposes to utilize an alternative development plan.
- All not described above require approval by the Planning Commission.
- For purposes of determining these thresholds, a contiguous development under common ownership shall be considered one development site and shall not be partitioned into smaller sites for planning approval processes.

2. A simplified site plan prepared by a licensed professional and reflecting the requirements for development in the appropriate design level shall be required for all projects that do not meet the thresholds for a site as established in Chapter 4, Permits and Final Plat Approval.
3. **Alternative Development Plan**
An alternative development plan provides the option to address the design standards through a flexible discretionary process if site constraints do not permit full compliance with the standards. Alternative development plans require review and approval by the Planning Commission, and if approved, the Planning Commission must find that the alternative development plan meets or exceeds the objectives of the design standards and/or any adopted small area plans. The following criteria shall be used to approve or deny an alternative development plan:
 - a. The proposal improves pedestrian and vehicular connectivity.
 - b. The proposal ensures that infrastructure is capable of accommodating the development prior to the development occurring.
 - c. The proposal results in a quality development that overall is in line with the intent of the design standards in this section.
 - d. The proposal is consistent with the vision of any applicable adopted plans.
4. **Approval Timeframes**
 - a. Site plans requiring approval by the Planning Director shall be acted on within 60 calendar days of acceptance of a complete applicant submission to the City-Parish, unless an applicant requests additional time. Time required for an applicant to address issues or problems shall not be included within the 60 day timeframe required for staff action. If no action is taken within 60 days of an accepted submission, the plan shall be deemed approved.
 - b. Site plans requiring Planning Commission review shall be acted on within 120 days of an applicant providing a completed and accepted submittal to the City-Parish, unless an applicant requests additional time. Time required for an applicant to address issues or problems shall not be included within the 120 day timeframe required for Planning Commission action. If no action is taken within 120 days, the site plan shall be deemed approved as submitted.

Section 10.105a Standards Applicable in All Levels

The following standards shall be applicable in all design levels.

- A. **Driveways**
 1. Every platted lot shall be permitted at least one driveway onto each street maintained by the Parish on which the lot abuts.
 2. The Director of Public Works may alter any of the standards described below, if in the opinion of the Director, the alteration is in the best interest of public safety.
 - a. **Dimensions**
Maximum driveway dimensions are described below in Table 3.

Table 3: DRIVEWAY DESIGN STANDARDS				
Land Use	Driveway Width¹ in Feet		Driveway Curb Radius in Feet	
	Minimum	Maximum	Minimum	Maximum
Multifamily	24	30	15	30

Office and Retail	24	30	15	30
Service Stations	24	40	15	30
Industrial	30	45	25	50
Commercial One-Way Drives	20	25	15	30
Divided Drives: Multifamily, Office or Retail	20	25	15	40

NOTES:

1. Measured at the point where the curb return radii end perpendicular to the street curb or edge of pavement.
- b. Number and Spacing

The maximum number of driveways allowed per platted lot, unless additional driveways are required by the Fire Department, and the minimum spacing required between driveways on the same platted lot and from an existing driveway on an adjacent lot are specified below in Table 4.

Table 4: MAXIMUM NUMBER OF DRIVEWAYS AND MINIMUM SPACING BETWEEN DRIVEWAYS				
Land Use	Frontage (feet)	Maximum Number of Driveways	Minimum Spacing Between Driveways on Same Lot (feet)	Minimum Spacing to Existing Driveway on Adjacent Lot (feet)
Multi-family, commercial or industrial on a collector street	Less than 200	1	N/A	50
	200 to 300	2	75	50
	More than 300	1 per 150 ft of frontage	100	50
Multi-family, commercial or industrial on an arterial street	Less than 500	1	N/A	100
	500 to 1,000	2	250	100
	More than 1,000	1 per 500 ft of frontage	250	100

- c. Corner Clearances

Required corner clearances shall be as shown in Table 5, however, each platted lot shall be allowed at least one driveway onto a street maintained by the Parish, regardless of the standards below.

Table 5: MINIMUM CORNER CLEARANCES BETWEEN DRIVEWAY & INTERSECTION			
Type of Street Driveway Enters	Type of Intersecting Street	Minimum Corner Clearance (in feet)	
		Approach Side of Intersection	Departure Side of Intersection
Arterial	Arterial	150	100
	Collector	100	70
	Local	50	30
Collector	Arterial	100	70
	Collector	70	50
	Local	40	30
Local	Arterial	50	30
	Collector	40	30
	Local	30	30

Section 10.105b Downtown Design Standards

The downtown area represents the historic core of the City of Baton Rouge that is developed with the highest intensity uses in the parish as well as the older neighborhoods immediately adjacent to it. It includes pedestrian-oriented and bikeable areas within downtown or other pedestrian-oriented areas with similar densities as downtown.

A. Building Placement

1. Primary Frontage

A minimum of 75% of the primary street frontage for any development shall have buildings within 10 feet of the front property line with the principal entrance oriented to that frontage. When site constraints preclude strict compliance with this requirement, the building line shall be measured one foot behind the line created by that constraint. On a corner lot or a lot with frontages on multiple streets, the Planning Director shall determine the primary street frontage considering the following:

- e. The street classification of all streets;
- f. The prevailing orientation of other buildings in the area;
- g. The length of the block face on which the building is located; and,
- h. The location of any alley.

2. All Other Frontages

A minimum of 50% of the side and rear street frontages shall have buildings or walls or hedges, at least four feet in height, within 10 feet of the respective property line.

B. Building Design

1. Primary Frontage

To provide visual connection between activities inside and outside the building, 50% of the building façade between two and 10 feet in height, as measured from the adjacent sidewalk, shall be made of windows or doors that are transparent, the bottom of which may not be more than four feet above the adjacent sidewalk. Windows shall not be mirrored or have glass tinted darker than 40% in order to meet this requirement.

2. All Other Building Frontages

All other street-facing facades, other than those facing an alley, shall comply with either of the standards listed below.

- c.
- d. Meet the primary frontage requirement above; or,
- e. Have at least five of the following elements incorporated into the street-facing facade:
 - I. Masonry (except for flat, non-decorative concrete block);
 - II. Concrete or masonry plinth at the base of the wall;
 - III. Belt courses of a different texture and color;
 - IV. Projecting cornice;
 - V. Decorative tile work;
 - VI. Medallions;

- VII. Opaque or translucent glass;
- VIII. Artwork or wall graphics;
- IX. Lighting fixtures;
- X. Green walls; or,
- XI. Architectural elements not listed above, if approved.

3. Building Orientation

Buildings shall have their primary entrance facing the primary street. The primary entrance shall be readily apparent as a prominent architectural component and visible from the street.

C. Site Design

1. Parking Areas

a. Surface Parking

All off-street surface parking shall be located to the side or rear of the primary building and shall be screened from the sidewalk by a wall or plantings between two and four feet in height. Parking areas shall comprise 40% or less of the street frontage for the lot or tract and, on corner lots, may not be located at the street corner.

b. Structured Parking

- i. Parking structure facades. Parking structure facades along street frontages shall complement and be integrated into the design of the principal building.
- ii. Parking structure ground floor uses. Active uses shall be required on 30% of the ground floor frontage of parking structures facing the street. Ground-story spaces should be flexible enough to accommodate a variety of uses.

2. Pedestrian ways

- a. No sidewalk waivers shall be granted.
- b. Pedestrian amenities such as benches, trash receptacles, galleries, arcades, awnings, and outdoor seating may be allowed in the right-of-way subject to approval by the Public Works Director.

3. Screening

All utility areas (refuse, service areas, mechanical equipment, exposed storage areas, machinery, truck loading areas, utility buildings, and other similar structures) shall be incorporated as part of the building and shall be visually integrated with the building architecture. If located on the roof, mechanical equipment shall be screened from view of these areas at ground level using materials compatible with the building façade.

4. Signs

b. Permanent signage

i. Types

Only the following types of signage shall be allowed:

- (g) Awning signs;
- (h) Marquee signs;
- (i) Projecting signs;
- (j) Roof signs;
- (k) Suspended signs; and,
- (l) Wall signs

ii. Size

- (c) Signs with their lowest point no higher than 20 feet above the ground shall be no more than one square foot of building sign per linear foot of building along primary street frontage.
- (d) Signs with their lowest point higher than 20 feet above grade may be as large as 10% of the total area of the building face on which they are located, provided that they do not block any windows or other openings of the building.

b. Temporary signage

A-frame sandwich board signs may be six square feet per sign face in area. A maximum of one such sign per entrance on the public street frontage in which the business advertised is located shall be allowed during business hours provided that they are brought inside at closing and are not placed to block Americans with Disabilities Act access.

5. Lighting

b. Placement

All lighting shall be building mounted at a maximum height of 12 feet with the exception of poles/structures in parking areas, plazas and public spaces. Pole-mounted lights shall be no taller than the heights listed below:

- a. 15 feet, for non-directional lighting
- ii. 30 feet, for directional (or full cut-off) lighting

b. Shielding

Light shall be shielded from adjacent properties to ensure that no more than five foot candles, as measured on a lighting plan, extend across the property line.

c. Access Lighting

All pedestrian access points shall be provided with building-mounted lighting and shall be visible from off site.

7. Fences and Walls

A. Materials

Fences and walls, other than those required for screening, shall be constructed of wood, decorative metal, or masonry (other than unfinished or painted concrete block). The structural support members of wooden perimeter fences shall be located on the interior of the fence and shall not be visible from adjacent properties.

B. Height

Fences located in front yards may not be higher than four feet in height unless they are constructed to permit 50% visibility into the yard or are required for screening.

Section 10.105c Urban Design Standards

Urban areas represent the small lot residential neighborhoods that largely developed within the city limits of Baton Rouge prior to 1949 and the commercial areas that serve these neighborhoods. They include pedestrian-oriented and bikeable areas with transit service that have lower planned density than downtown Baton Rouge.

A. Building Placement

1. Primary Frontage

A minimum of 50% of the primary street frontage for each development shall have buildings within 10 feet of the front property line with the principal entrance located on that frontage. When site constraints preclude strict compliance with this requirement, the building line shall be measured one foot behind the line created by that constraint. On a corner lot or a lot with frontages on multiple streets, the Planning Director shall determine the primary street frontage considering the following:

- a. The street classification of all streets;
- b. The prevailing orientation of other buildings in the area;
- c. The length of the block face on which the building is located; and,
The location of any alley.
- d. The location of any alley.

2. All Other Frontages

A minimum of 50% of the side and rear street frontages shall have buildings or walls or hedges, at least four feet in height, within 10 feet of the respective property line.

C. Building Design

1. Primary Frontage

To provide visual connection between activities inside and outside the building, 50% of the building façade between two and 10 feet in height, as measured from the adjacent sidewalk, shall be made of windows or doors

that are transparent, the bottom of which may not be more than four feet above the adjacent sidewalk. Windows shall not be mirrored or have glass tinted darker than 40% in order to meet this requirement.

2. All Other Building Frontages

All other street-facing facades, other than those facing an alley, shall comply with either of the standards listed below.

- c. Thirty percent (30%) of the building façade between two and 10 feet in height shall be made of windows or doors that are transparent, the bottom of which may not be more than four feet above the adjacent sidewalk. Windows shall not be mirrored or have glass tinted darker than 40% in order to meet this requirement.
- d. Have at least five of the following elements incorporated into the street-facing facade:
 - i. Masonry (except for flat, non-decorative concrete block);
 - ii. Concrete or masonry plinth at the base of the wall;
 - iii. Belt courses of a different texture and color;
 - iv. Projecting cornice;
 - v. Decorative tile work;
 - vi. Medallions;
 - vii. Opaque or translucent glass;
 - viii. Artwork or wall graphics;
 - ix. Lighting fixtures;
 - x. Green walls; or,
 - xi. Architectural elements not listed above, if approved.

3. Building Orientation

Buildings shall have their primary entrance facing the primary street. The primary entrance shall be readily apparent as a prominent architectural component and visible from the street.

C. Site Design

4. Parking Areas

c. Surface Parking

All off-street surface parking shall be located to the side or rear of the primary building and shall be screened from the sidewalk by a wall or plantings between two and four feet in height. Parking areas shall comprise 40% or less of the street frontage for the lot or tract and, on corner lots, may not be located at the corner.

d. Structured Parking

- i. Parking structure facades. Parking structure facades along street frontages shall complement and be integrated into the design of the principal building.
 - ii. Parking structure ground floor uses. Active uses shall be required on 30% of the ground floor frontage of parking structures facing the street.
- 5. Pedestrian ways
 - c. Where a sidewalk(s), multi-use path(s), or public transportation stop exists on the perimeter of a lot, a designated pedestrian access way shall connect the sidewalk, path or transportation stop to the primary entrance of the building. Pedestrian paths to buildings through parking lots shall be a minimum of 8-feet wide and clearly marked with paint, paving material, or other physical identification.
 - d. No sidewalk waivers shall be granted.
 - e. Pedestrian amenities such as benches, trash receptacles, galleries, arcades, awnings, and outdoor seating may be allowed in the right-of-way subject to approval by the Public Works Director.

3. Screening

- a. Loading docks shall be fully screened from the street or from adjacent residential property with screening that is a minimum of eight feet in height and complementary to the principal building architecture.
- b. Mechanical equipment and dumpsters shall be screened from view of all street frontages and adjacent properties with materials the same or a complimentary color and/or style as the building. If located on the roof, mechanical equipment shall be screened from view of these areas at ground level using the same color and/or a style compatible with the building façade.

6. Signs

- b. Permanent signage
 - i. Types

Only the following types of signage shall be allowed:

 - (i) Awning signs;
 - (j) Marquee signs;
 - (k) Monument signs;
 - (l) Projecting signs;
 - (m) Roof signs;
 - (n) Suspended signs; and,
 - (o) Wall signs.
 - iii. Size

- (a) Monument signs shall be limited to a maximum of five feet in height.
 - (b) All other signs shall be no more than one square foot of building sign per linear foot of building along primary street frontage provided that their lowest point is no higher than 20 feet above the ground.
 - (c) Signs with their lowest point higher than 20 feet above grade may be as large as 10% of the total area of the building face on which they are located, provided that they do not block any windows or other openings of the building.
- b. Temporary signage

A-frame sandwich board signs may be six square feet per sign face in area. A maximum of one such sign per entrance on the public street frontage in which the business advertised is located shall be allowed during business hours provided that they are brought inside at closing and are not placed to block Americans with Disabilities Act access.
- 5. Lighting
 - b. Height

Light fixtures shall no taller than the heights listed below:

 - iii. 15 feet, for non-directional lighting
 - iv. 30 feet, for directional (or full cut-off) lighting
 - b. Shielding

Light shall be shielded from adjacent properties to ensure that no more than 0.5 foot candles, as measured on a lighting plan, extend across the property line of adjacent residentially zoned properties and no more than five foot candles, as measured on a lighting plan, extend across the property line of all other adjacent properties.
 - c. Pedestrian Lighting.

Pedestrian lighting (free-standing or wall-mounted) shall be provided at one light for every 75 feet of street frontage or per an approved Pedestrian Lighting Plan.
- 6. Fences and Walls
 - c. Materials

Fences and walls, other than those required for screening, shall be constructed of wood, decorative metal, or masonry (other than unfinished or painted concrete block). The structural support members of wooden perimeter fences shall be located on the interior of the fence and shall not be visible from adjacent properties.
 - d. Height

Fences located in front yards may not be higher than four feet in height unless they are constructed to permit 50% visibility into the yard or are required for screening.
- 7. Pedestrian Amenities

Pedestrian amenities such as benches, trash receptacles, galleries, arcades, awnings, and outdoor seating may be allowed in the right-of-way subject to approval by the Public Works Director.

Section 10.105d Walkable Design Standards

Walkable areas are those areas designated as Regional Centers and Town Centers in the comprehensive plan, as well as areas along major arterials. While currently largely auto oriented, they have a high potential for walkability and bicycling and transit service.

A. Building Placement

A minimum of 50% of the primary street frontage for any development shall have buildings within 60 feet of the front property line with the principal entrance located on that frontage. When site constraints preclude strict compliance with this requirement, the building line shall be measured one foot behind the line created by that constraint. On a corner lot or a lot with frontages on multiple streets, the Planning Director shall determine the primary street frontage considering the following:

1. The street classification of all streets;
2. The prevailing orientation of other buildings in the area;
3. The length of the block face on which the building is located; and,
4. The location of any alley.

B. Building Design

1. Primary Frontage

To provide visual connection between activities inside and outside the building, 25% of the building façade between two and 10 feet in height, as measured from the adjacent sidewalk, shall be made of windows or doors that are transparent, the bottom of which may not be more than four feet above the adjacent sidewalk. Windows shall not be mirrored or have glass tinted darker than 40% in order to meet this requirement.

2. All Other Building Frontages

All other street-facing facades, other than those facing an alley, shall comply with either of the standards listed below.

- a. Meet the primary frontage requirement above; or,
- b. Have at least five of the following elements incorporated into the street-facing facade:
 - I. Masonry (except for flat, non-decorative concrete block);
 - II. Concrete or masonry plinth at the base of the wall;

- III. Belt courses of a different texture and color;
- IV. Projecting cornice;
- V. Decorative tile work;
- VI. Medallions;
- VII. Opaque or translucent glass;
- VIII. Artwork or wall graphics;
- IX. Lighting fixtures;
- X. Green walls; or,
- XI. Architectural elements not listed above, if approved.

3. Building Orientation

Buildings shall have their primary entrance facing the primary street. The primary entrance shall be readily apparent as a prominent architectural component and visible from the street.

C. Site Design

1. Streets and Driveways

Residential Subdivision Street Network

Developments that dedicate public streets or any development of 40 lots or more shall provide at least two access points, including at least one street stub out on each side (as defined by the cardinal directions) for each 1,000 linear feet on any single side of the development, unless the stub out cannot be constructed due to existing development (with lots less than one acre in size) or significant topographic features or the existing street pattern in the area of the development already provides for vehicular connections at intervals no greater than 0.2 miles apart. When connections to anticipated or proposed surrounding streets are required, the right-of-way shall be extended and the street developed to the property line of the subdivided property at the point where the connection to the anticipated or proposed street is expected.

b. Nonresidential streets and driveways

Site plans on tracts over one acre in size proposing multiple individual lots shall reflect an internal circulation plan, primary and secondary access points, and, if required by DPW, additional on street turn lanes to serve the entire site. Site plans shall also require provisions for access points to eventually extend into adjacent lots.

2. Parking Areas

No more than one row of parking spaces shall be allowed in the front of a building on its primary frontage.

3. Pedestrian ways

- a. Where a sidewalk(s), multi-use path(s), or public transportation stop exists on the perimeter of a lot, a designated pedestrian access way shall connect the sidewalk, path or transportation stop to the primary entrance of the building. Pedestrian paths to buildings through parking lots shall be a minimum of eight feet wide and clearly marked with paint, paving material, or other physical identification.

- b. A mid-block pedestrian passage may be required when the face of the block exceeds 1,500 feet, unless site restrictions do not permit its creation. Such passage shall be located roughly perpendicular to the longest block face and at least 500 feet from any cross street.
 - c. No sidewalk waivers shall be granted.
 - d. Pedestrian amenities such as benches, trash receptacles, galleries, arcades, awnings, and outdoor seating may be allowed in the right-of-way subject to approval by the Public Works Director.
4. Transit Support
- Developments over 2.5 acres in size shall coordinate with CATS and provide appropriate transit supportive elements, if required.

5. Screening

- a. Loading docks shall be fully screened from the street or from adjacent residential property with screening that is a minimum of eight feet in height and complementary to the principal building architecture.
- b. Mechanical equipment and dumpsters shall be screened from view of all street frontages and adjacent properties with materials the same or a complementary color and/or a style as the building. If located on the roof, mechanical equipment shall be screened from view of these areas at ground level using materials the same color and/or a style compatible with the building façade.

6. Signs

a. Permanent signage

i. Types

Only the following types of signage shall be allowed:

- (a) Awning signs;
- (b) Marquee signs;
- (c) Monument signs;
- (d) Projecting signs;
- (e) Roof signs;
- (f) Suspended signs; and
- (g) Wall signs.

ii. Size

- (a) Monument signs shall be limited to a maximum of 15 feet in height.
- (b) All other signs shall be no more than one square foot of building sign per linear foot of building along primary street frontage provided that their lowest point is no higher than 20 feet above the ground.
- (c) Signs with their lowest point higher than 20 feet above grade may be as large as 10% of the total area of the building face on which they are

located, provided that they do not block any windows or other openings of the building.

b. Temporary signage

A-frame sandwich board signs may be six square feet per sign face in area. A maximum of one such sign per entrance on the public street frontage in which the business advertised is located shall be allowed during business hours provided that they are brought inside at closing and are not placed to block Americans with Disabilities Act access.

7. Lighting

a. Height

Light fixtures shall be no taller than the heights listed below:

- i. 15 feet, for non-directional lighting.
- ii. 30 feet, for directional (or full cut-off) lighting.

b. Shielding

Light shall be shielded from adjacent properties to ensure that no more than 0.5 foot candles, as measured on a lighting plan, extend across the property line of adjacent residentially zoned properties and no more than five foot candles, as measured on a lighting plan, extend across the property line of all other adjacent properties.

c. Pedestrian Lighting

Pedestrian lighting (free-standing or wall-mounted) shall be provided at one light for every 75 feet of street frontage or per an approved Pedestrian Lighting Plan.

8. Fences and Walls

a. Materials

Fences and walls, other than those required for screening, shall be constructed of wood, decorative metal, or masonry (other than unfinished or painted concrete block). The structural support members of wooden perimeter fences shall be located on the interior of the fence and shall not be visible from adjacent properties.

b. Height

Fences located in front yards may not be higher than four feet in height unless they are constructed to permit 50% visibility into the yard or are required for screening.

Section 10.105e Suburban Design Standards

Suburban areas include much of the large-lot residential development of the parish, which are predominantly auto-oriented with limited opportunities for pedestrian activity. Suburban areas have the potential for enhanced pedestrian commercial areas, and sidewalks that connect to schools, public facilities and those commercial areas.

A. Building Design

Street facing walls greater than 20 feet in length, other than those facing an alley, shall comply with either of the standards listed below:

1. Have windows that are transparent, covering at least 25% of the building facade that lies between 0 feet and 10 feet above grade. Windows shall not be mirrored or have glass tinted darker than 40% in order to meet this requirement; or,
2. Have at least five of the following elements incorporated into the street-facing facade:
 - a. Masonry (except for flat, non-decorative concrete block);
 - b. Concrete or masonry plinth at the base of the wall;
 - c. Belt courses of a different texture and color;
 - d. Projecting cornice;
 - e. Decorative tile work;
 - f. Medallions;
 - g. Opaque or translucent glass;
 - h. Artwork or wall graphics;
 - i. Lighting fixtures;
 - j. Green walls; or,
 - k. Architectural elements not listed above, if approved.

B. Site Design

1. Streets and Driveways

- a. Residential Subdivision Street Network
Developments that dedicate public streets or any development of 40 lots or more shall provide at least two access points, including at least one street stub out on each side (as defined by the cardinal directions) for each 1,400 linear feet on any single side of the development, unless the stub out cannot be constructed due to existing development patterns (with lots less than one acre in size) or significant topographic features or the existing street pattern in the area of the development already provides for vehicular connections at intervals no greater than 0.25 miles apart. When connections to anticipated or proposed surrounding streets are required, the right-of-way shall be extended and the street developed to the property line of the subdivided property at the point where the connection to the anticipated or proposed street is expected
- b. Nonresidential streets and driveways
Site plans on tracts over one acre in size proposing multiple individual lots shall reflect an internal circulation plan, primary and secondary access points, and, if required by DPW, additional on street turn lanes to serve the entire site. Site plans shall also require provisions for access points to eventually extend into adjacent lots.

2. Pedestrian ways

- a. A minimum eight foot wide designated pedestrian access way through the parking lot to the primary entrance of the building shall be provided and clearly marked.
- b. Where a sidewalk(s), multi-use path(s), or public transportation stop exists on the perimeter of a lot, a designated pedestrian access way shall connect the sidewalk, path or transportation stop to the primary entrance of the building.
- c. Pedestrian amenities such as benches, trash receptacles, galleries, arcades, awnings, and outdoor seating may be allowed in the right-of-way subject to approval by the Public Works Director.

3. Screening

- a. Loading docks shall be fully screened from the street or from adjacent residential property with screening a minimum of 8 feet in height and complementary to the principal building architecture.

- b. Mechanical equipment and dumpsters shall be screened from view of all street frontages and adjacent properties with materials the same or a complementary color and/or style as the building. If located on the roof, mechanical equipment shall be screened from view of these areas at ground level using materials the same color and/or a style compatible with the building façade.

4. Fences and Walls

- a. Fences and walls, other than those required for screening, shall be constructed of vinyl coated chain-link, vinyl, wood, decorative metal, or masonry (other than unfinished or painted concrete block). The structural support members of wooden perimeter fences shall be located on the interior of the fence and shall not be visible from adjacent properties.
- b. Height
Fences located in front yards may not be higher than four feet in height unless they are constructed to permit 50% visibility into the yard or are required for screening.

Section 10.105f Rural Design Standards

Rural areas are located in outlying parts of the parish that are not likely to be developed or redeveloped in the near-term. These areas typically have streets that are not curbed or guttered and large acreage lots that may be used for agricultural purposes.

A. Streets and Driveways

1. Residential Subdivision Street Network

Developments that dedicate public streets or any development of 40 lots or more shall provide at least two access points, including at least one street stub out on each side

(as defined by the cardinal directions) for each 2,600 linear feet on any single side of the development, unless the stub out cannot be constructed due to existing development patterns (with lots less than one acre in size) or significant topographic features or the existing street pattern in the area of the development already provides for vehicular connections at intervals no greater than 0.5 miles apart. When connections to anticipated or proposed surrounding streets are required, the right-of-way shall be extended and the street developed to the property line of the subdivided property at the point where the connection to the anticipated or proposed street is expected.

2. Nonresidential streets and driveways

Site plans on tracts over one acre in size proposing multiple individual lots shall reflect an internal circulation plan, primary and secondary access points, and, if required by DPW, additional on street turn lanes to serve the entire site. Site plans shall also require provisions for access points to eventually extend into adjacent lots.

B. Pedestrian ways

1. A minimum eight foot wide designated pedestrian access way through the parking lot to the primary entrance of the building shall be provided and clearly marked.
2. Where a sidewalk(s), multi-use path(s), or public transportation stop exists on the perimeter of a lot, a designated pedestrian access way shall connect the sidewalk, path or transportation stop to the primary entrance of the building.
